# What are thin layers of phytoplankton?

- \* Thickness  $< 3$  m
- \* Intensity  $> 2 \times$  Background
- \* TL can extent horizontally over several km and persist for several days

# Motivation

Mussel raft, Ría de Pontevedra

# Motivation

# Motivation

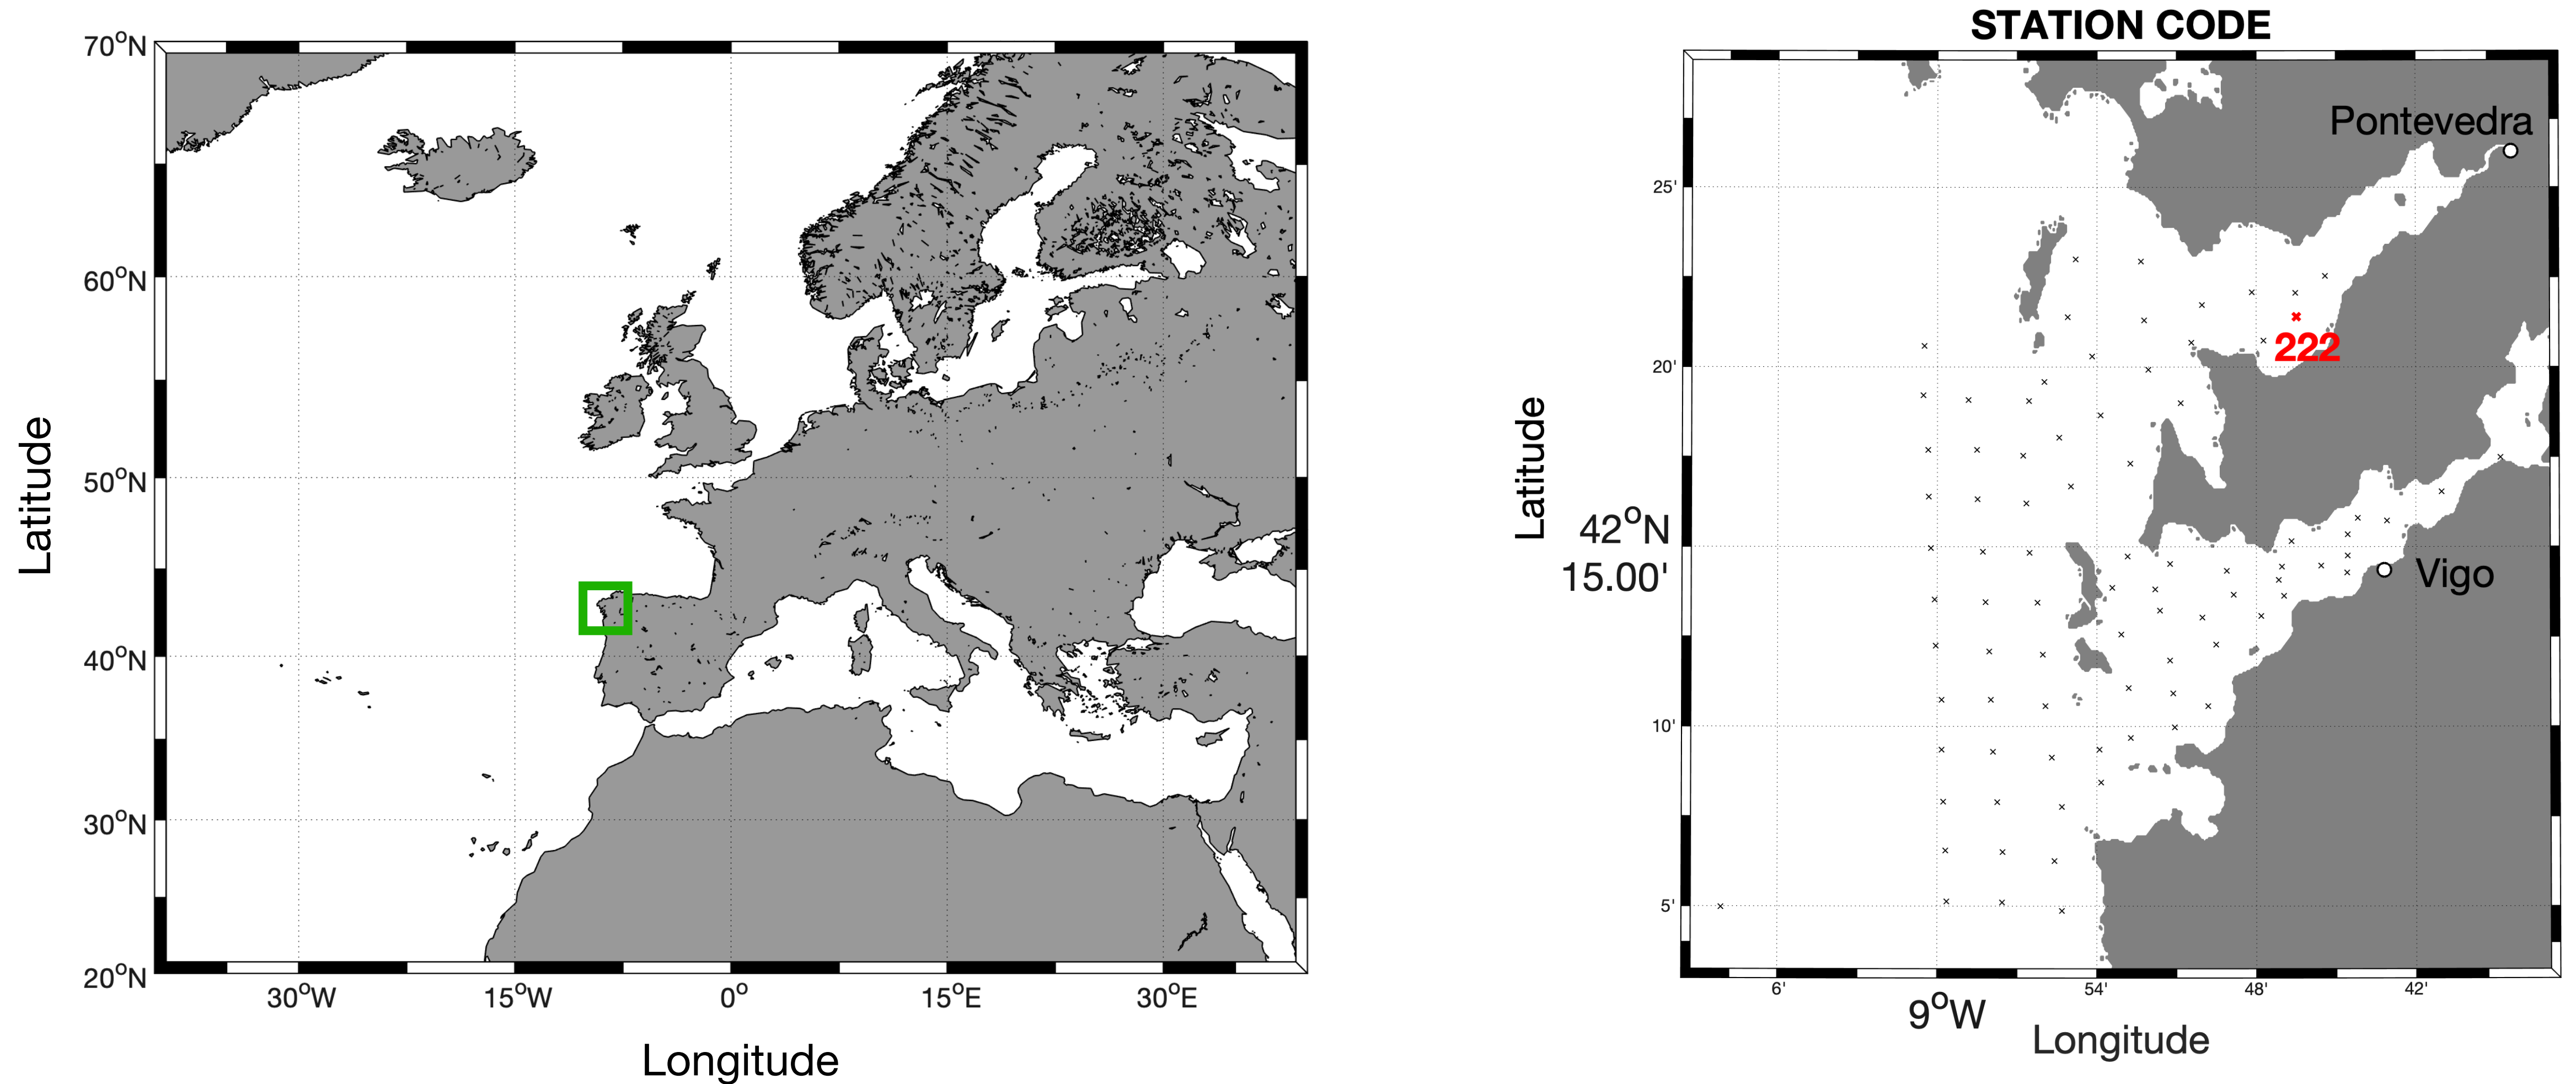

# Questions

- \* What are the **dynamics** of a thin layer of phytoplankton?
- \* What is the **spatial extent**?
- \* What is the contribution of **physical and biological processes** to their formation?

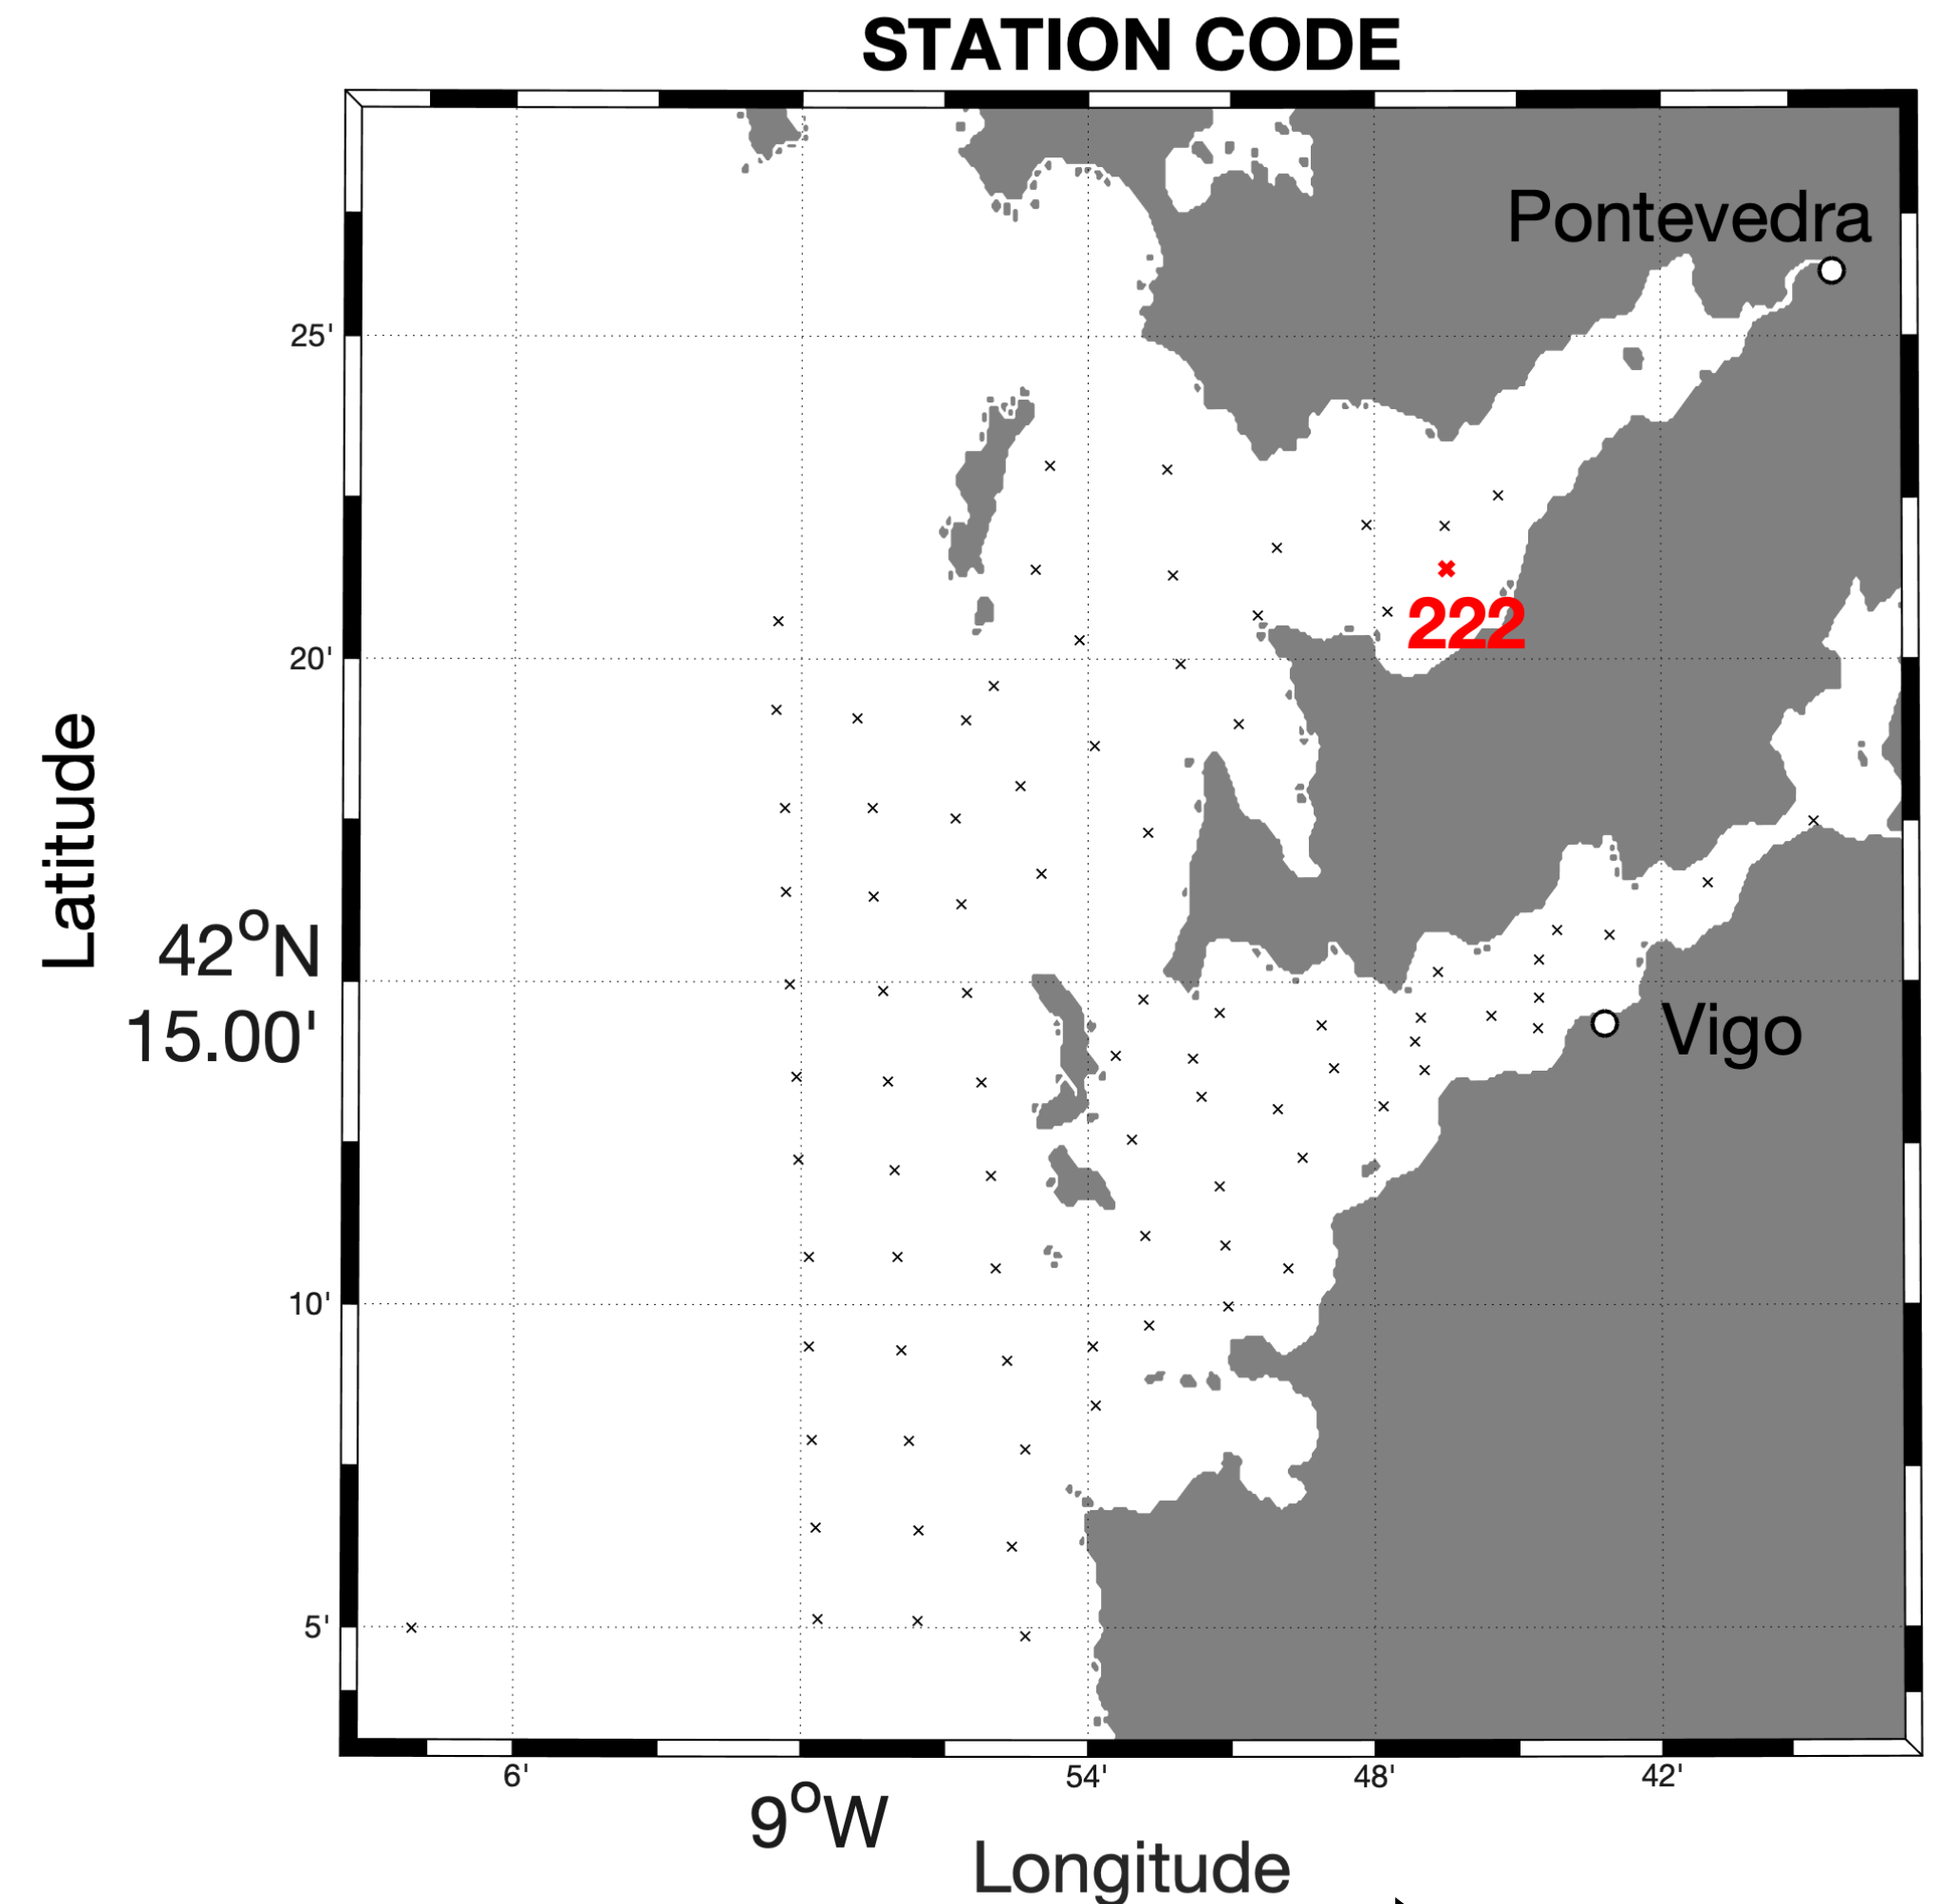

# Research design

REMEDIOS-TLP cruise, July 2018

# Research design

- \* 4 SURVEY samplings through the 84 stations
  - \* 1 CTD cast per station (total = 225 profiles)
- \* 3 INTENSIVE samplings at station **222**
  - \* 5 high resolution CTD profiles every 30 minutes (total = 1674 profiles)
  - \* 1 sampling with Niskin bottles at different depths every 6 hours

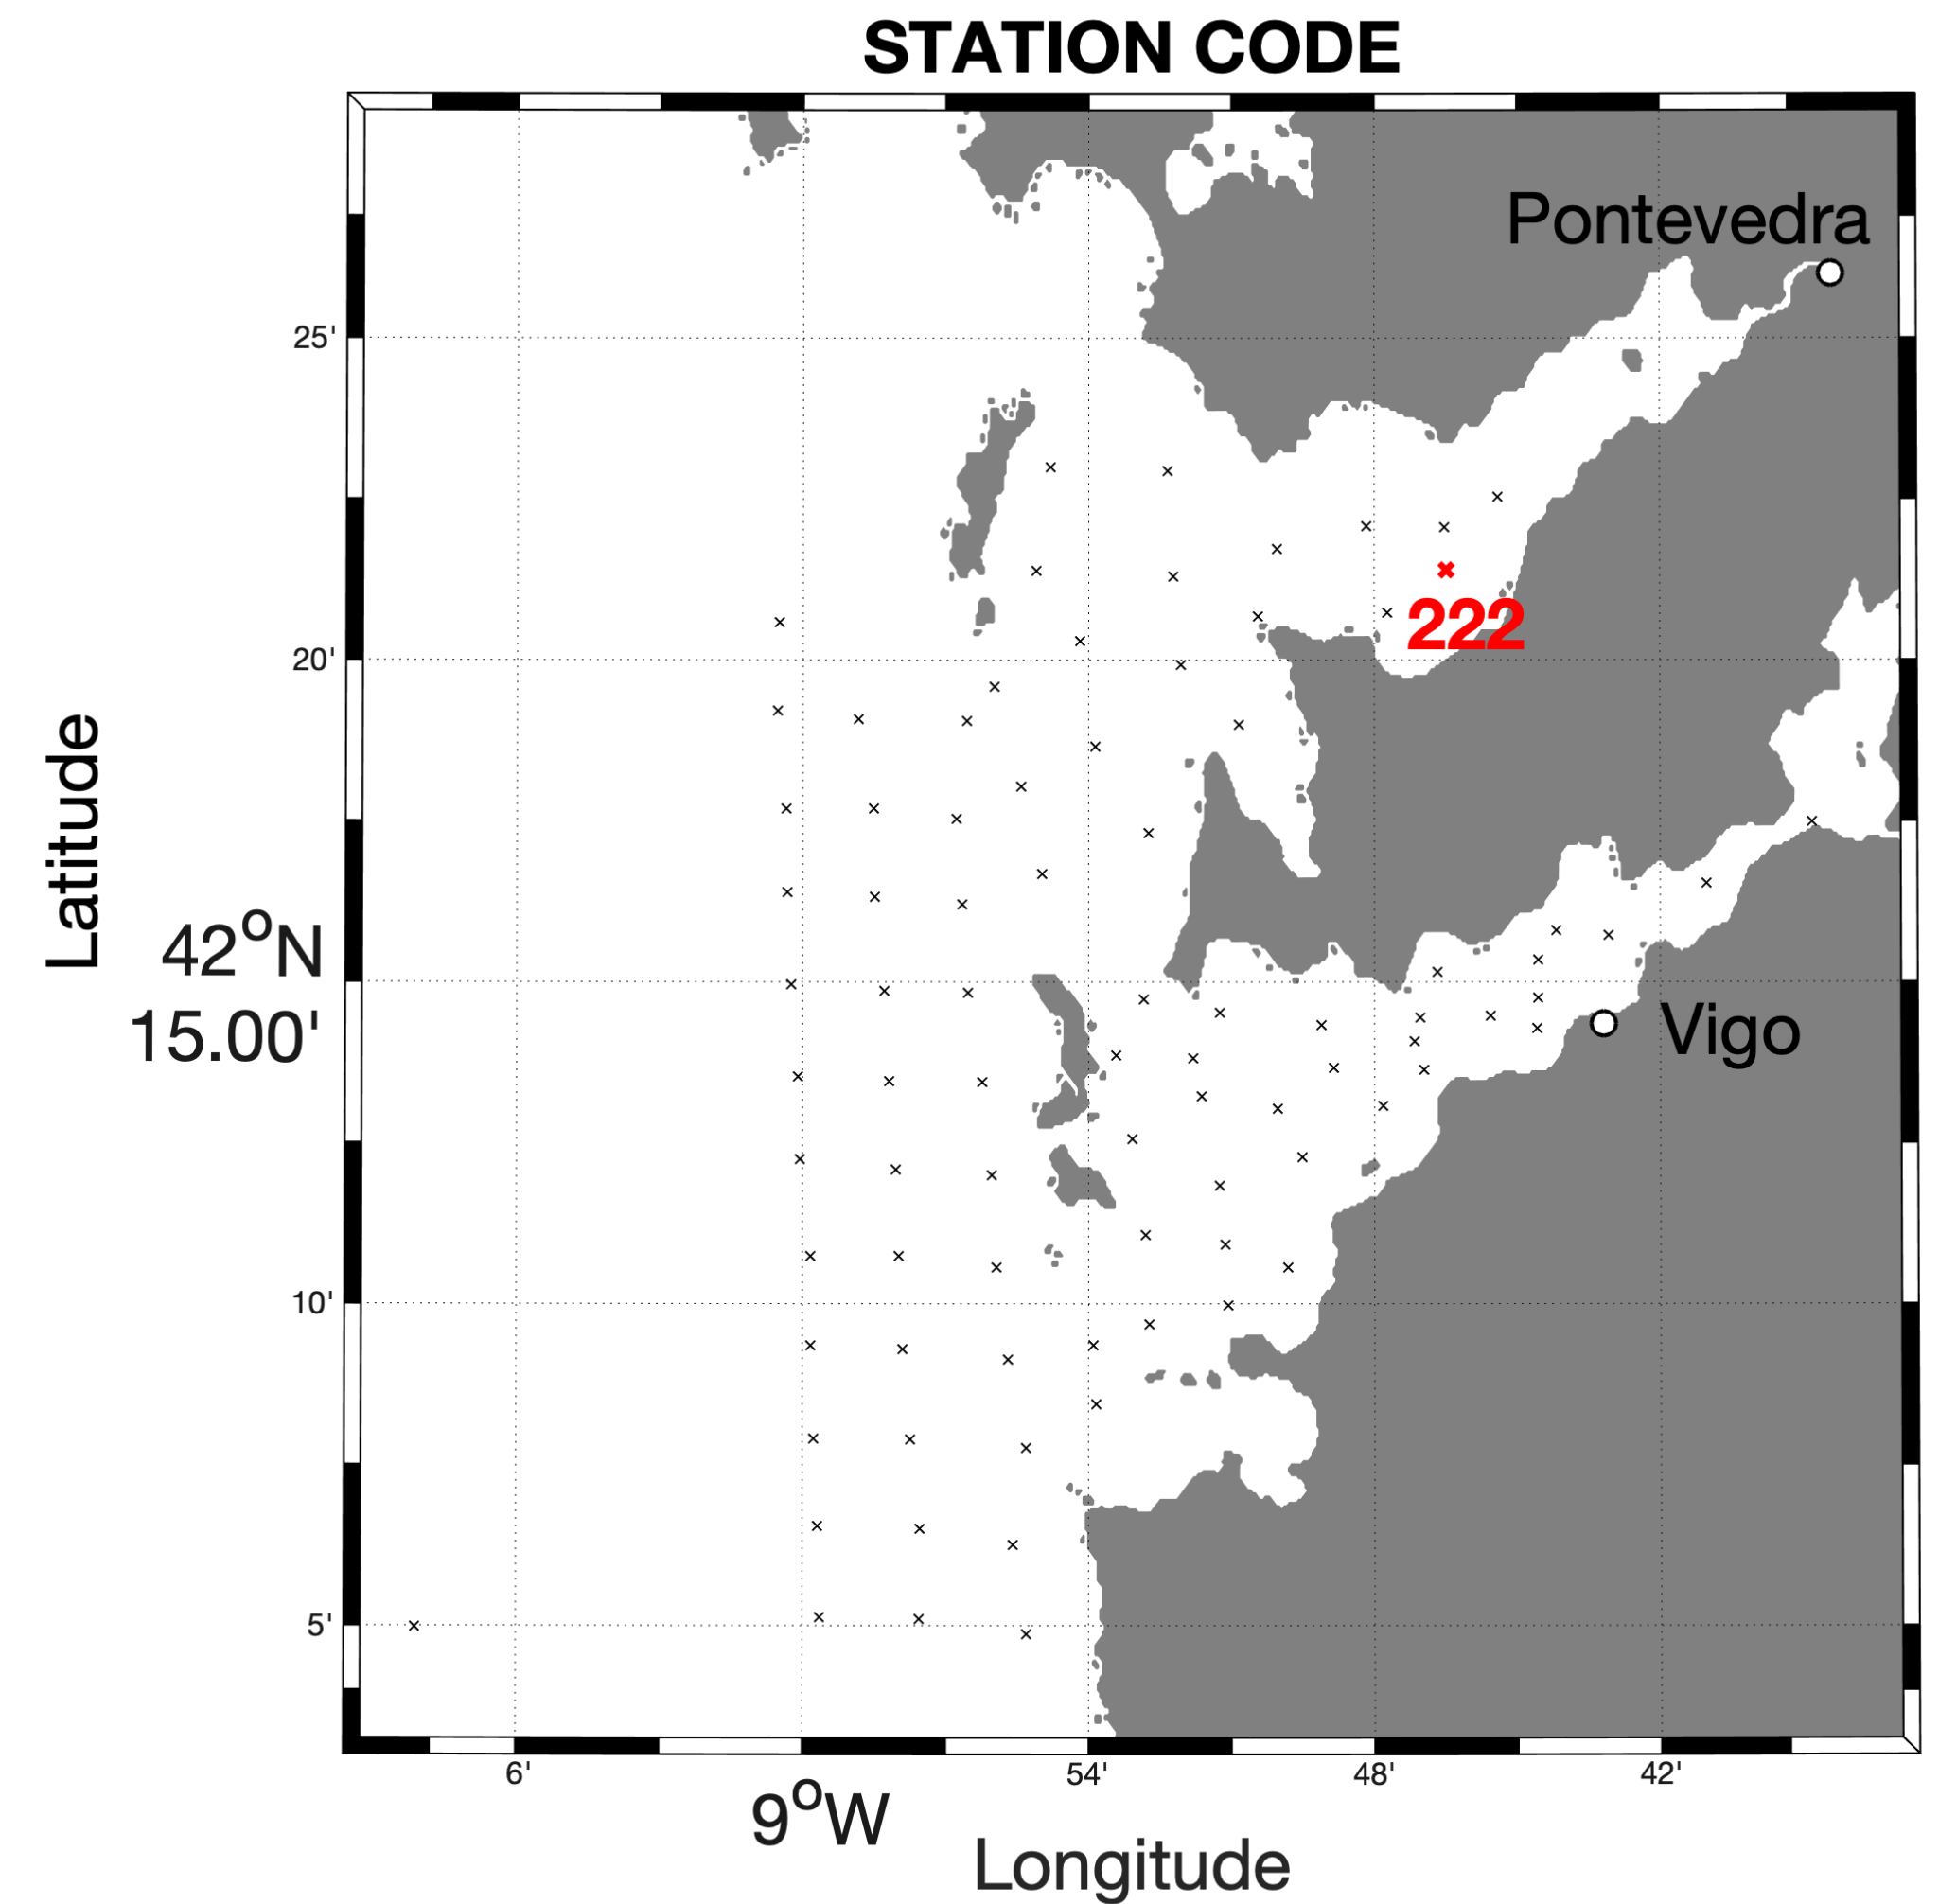

# Variables

## INTENSIVE SAMPLINGS (222)

- High resolution CTD
  - \* **Temperature**
  - \* **Chlorophyll *a* (from fluorescence)**
- Niskin bottles
  - \* **Nitrate**
  - \* **Chlorophyll *a***
  - \* **Primary production <sup>14</sup>C**

## SURVEY SAMPLINGS

- 1 CTD cast per station
  - \* **Fluorescence** profiles -> thin layers detection

# Main goals

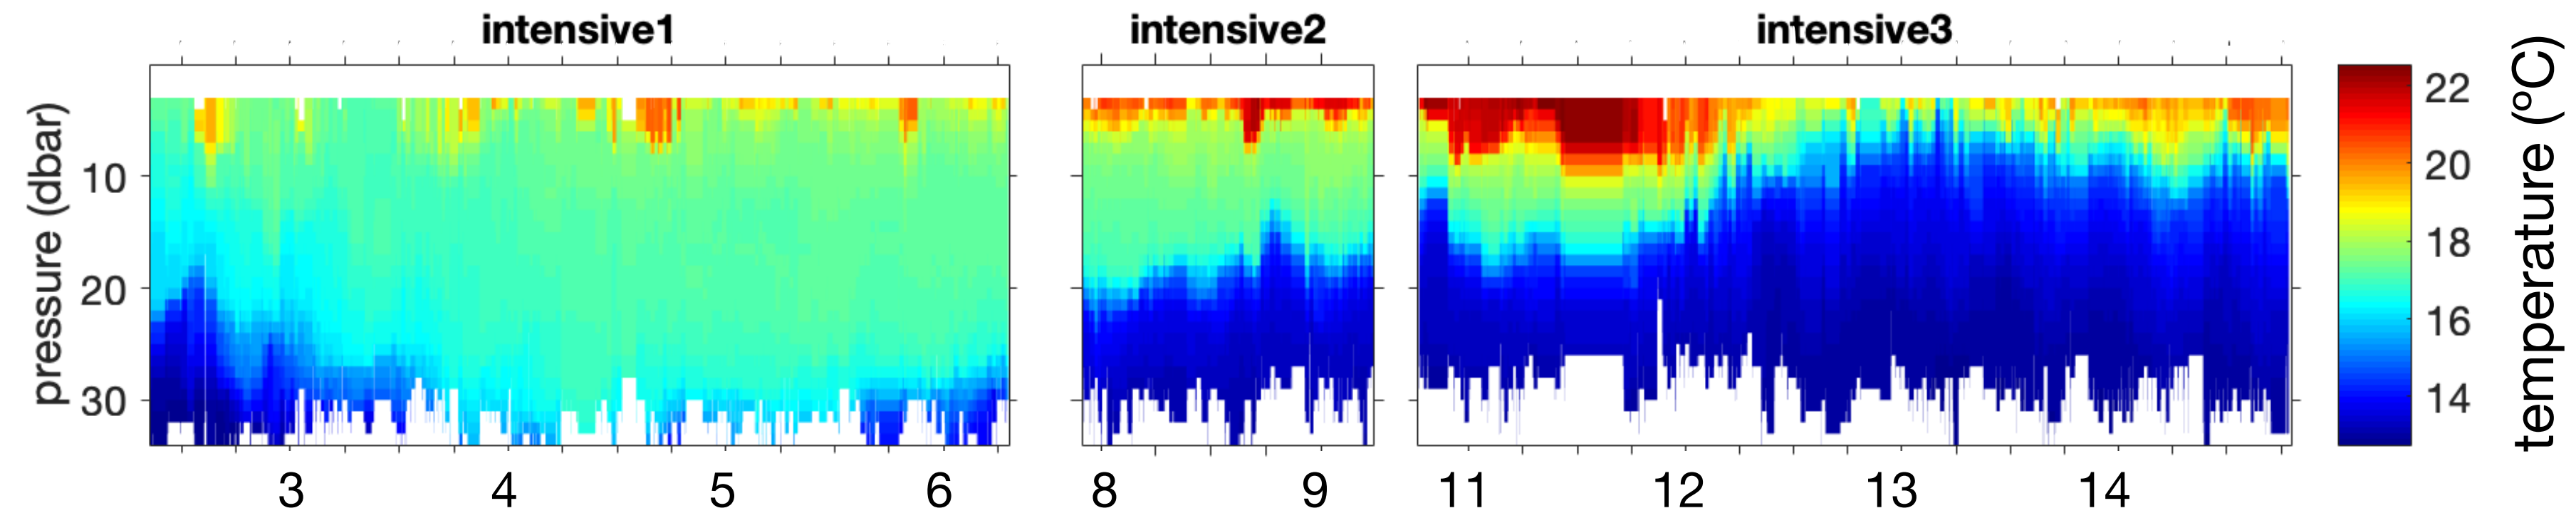

- \* What are the **dynamics** of the thin layer detected during the REMEDIOS-TLP cruise?
- \* What is the **spatial extent** of the thin layer of phytoplankton?
- \* What is the contribution of **physical and biological processes**?

# Main goals

- \*What are the **dynamics** of the thin layer detected during the REMEDIOS-TLP cruise?
- \*What is the **spatial extent** of the thin layer of phytoplankton?
- \*What is the contribution of **physical and biological processes**?

# What is the temporal variability?

Temperature 222 st

Nitrate 222 st

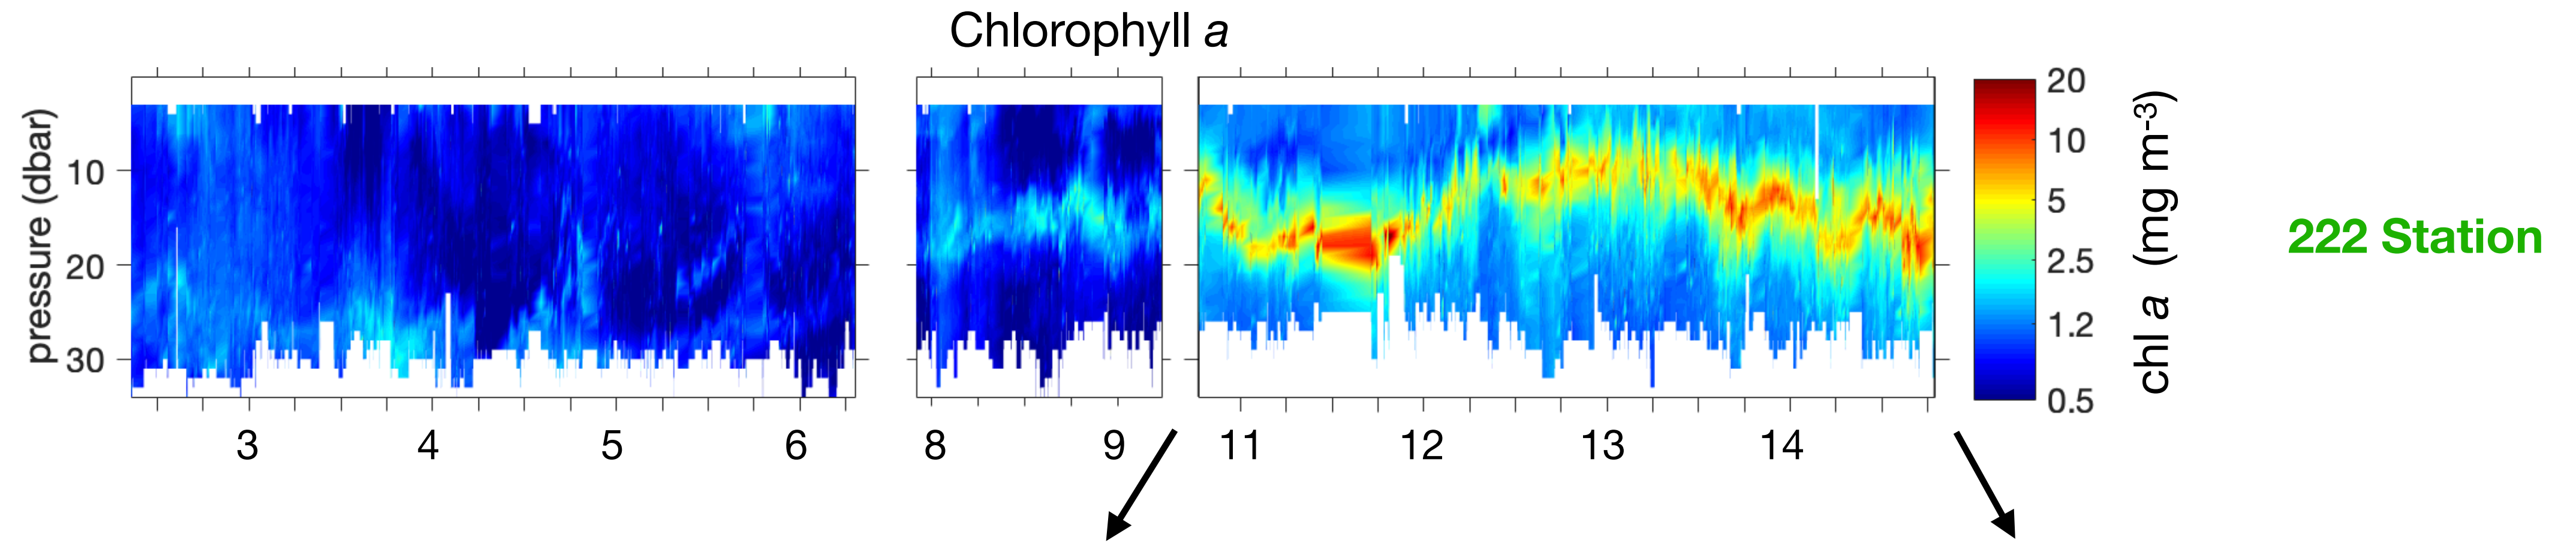

Chlorophyll a 222 st

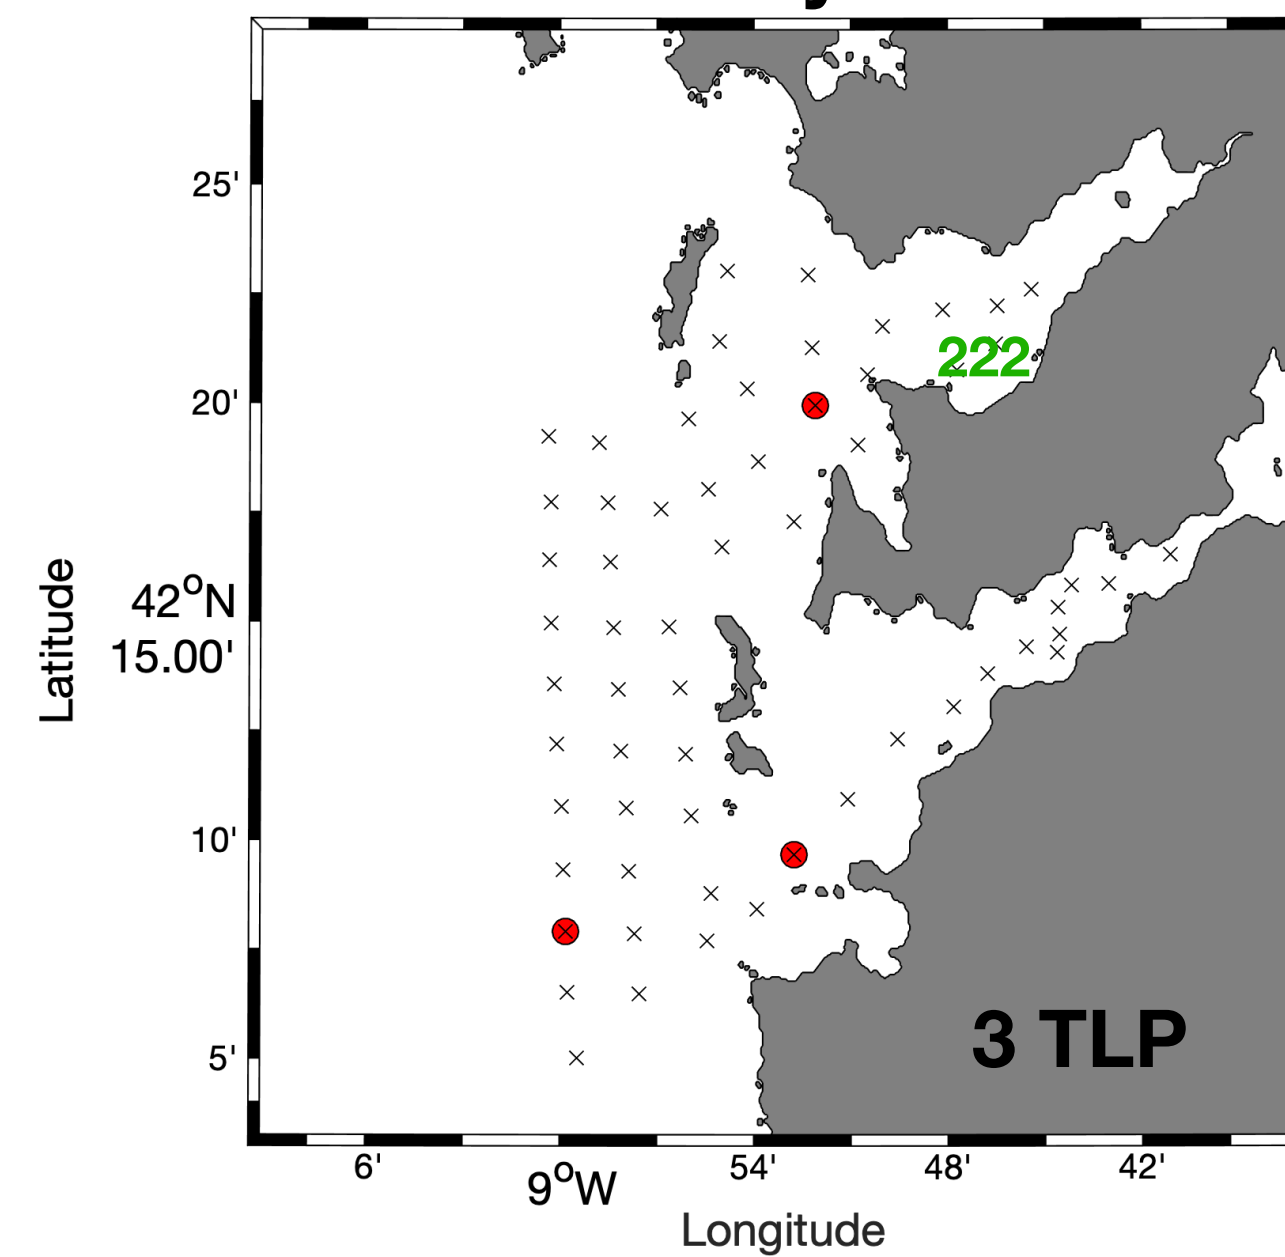

# Main goals

- \*What are the **dynamics** of the thin layer detected during the REMEDIOS-TLP cruise?
- \*What is the **spatial extent** of the thin layer of phytoplankton?
- \*What is the contribution of **physical and biological processes**?

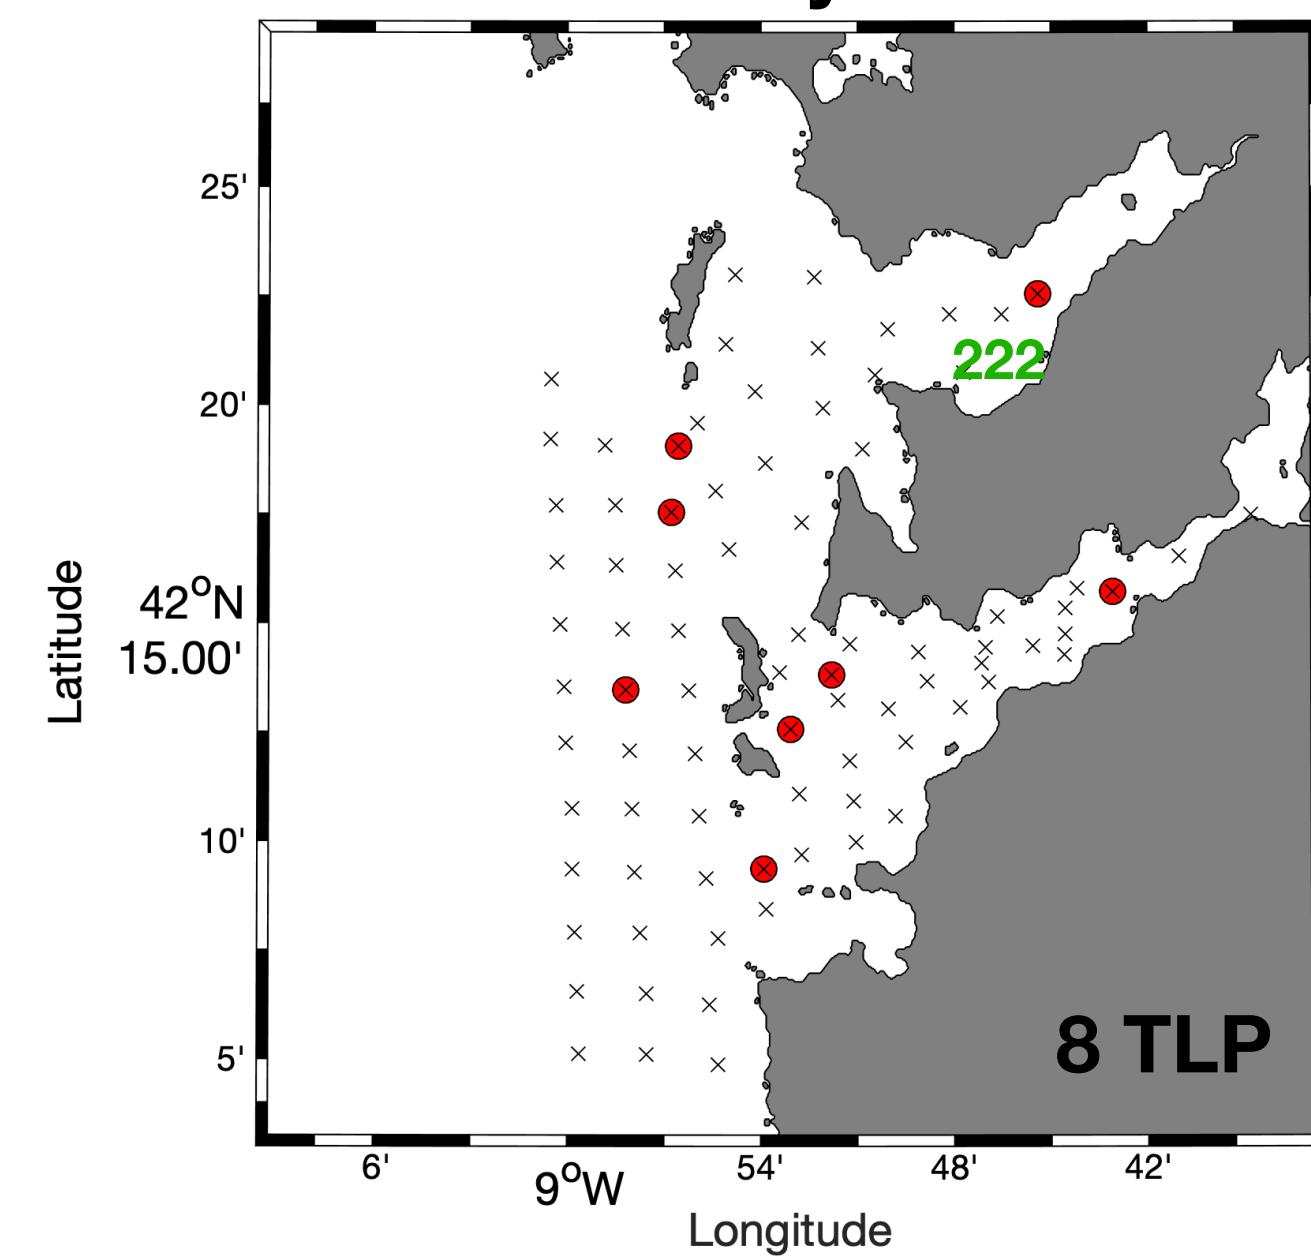

# Spatial extent

survey 3

survey 4

# Main goals

- \*What are the **dynamics** of the thin layer detected during the REMEDIOS-TLP cruise?
- \*What is the **spatial extent** of the thin layer of phytoplankton?
- \*What is the contribution of **physical and biological processes**?

# How did it form?

$$\frac{\partial chl\ a}{\partial t} = \left( \frac{\partial chl\ a}{\partial t} \right)_{gains} - \left( \frac{\partial chl\ a}{\partial t} \right)_{losses}$$

$$\frac{\partial chl\ a}{\partial t} = \left( \frac{\partial chl\ a}{\partial t} \right)_{biological} + \left( \frac{\partial chl\ a}{\partial t} \right)_{physical} - \left( \frac{\partial chl\ a}{\partial t} \right)_{biological} - \left( \frac{\partial chl\ a}{\partial t} \right)_{physical}$$

# How did it form?

$$\frac{\partial chl\ a}{\partial t} = \left( \frac{\partial chl\ a}{\partial t} \right)_{gains} - \left( \frac{\partial chl\ a}{\partial t} \right)_{losses}$$

$$\frac{\partial chl\ a}{\partial t} = \left( \frac{\partial chl\ a}{\partial t} \right)_{biological} + \left( \frac{\partial chl\ a}{\partial t} \right)_{physical} - \left( \frac{\partial chl\ a}{\partial t} \right)_{biological} - \left( \frac{\partial chl\ a}{\partial t} \right)_{physical}$$

**Net rate**

# How did it form?

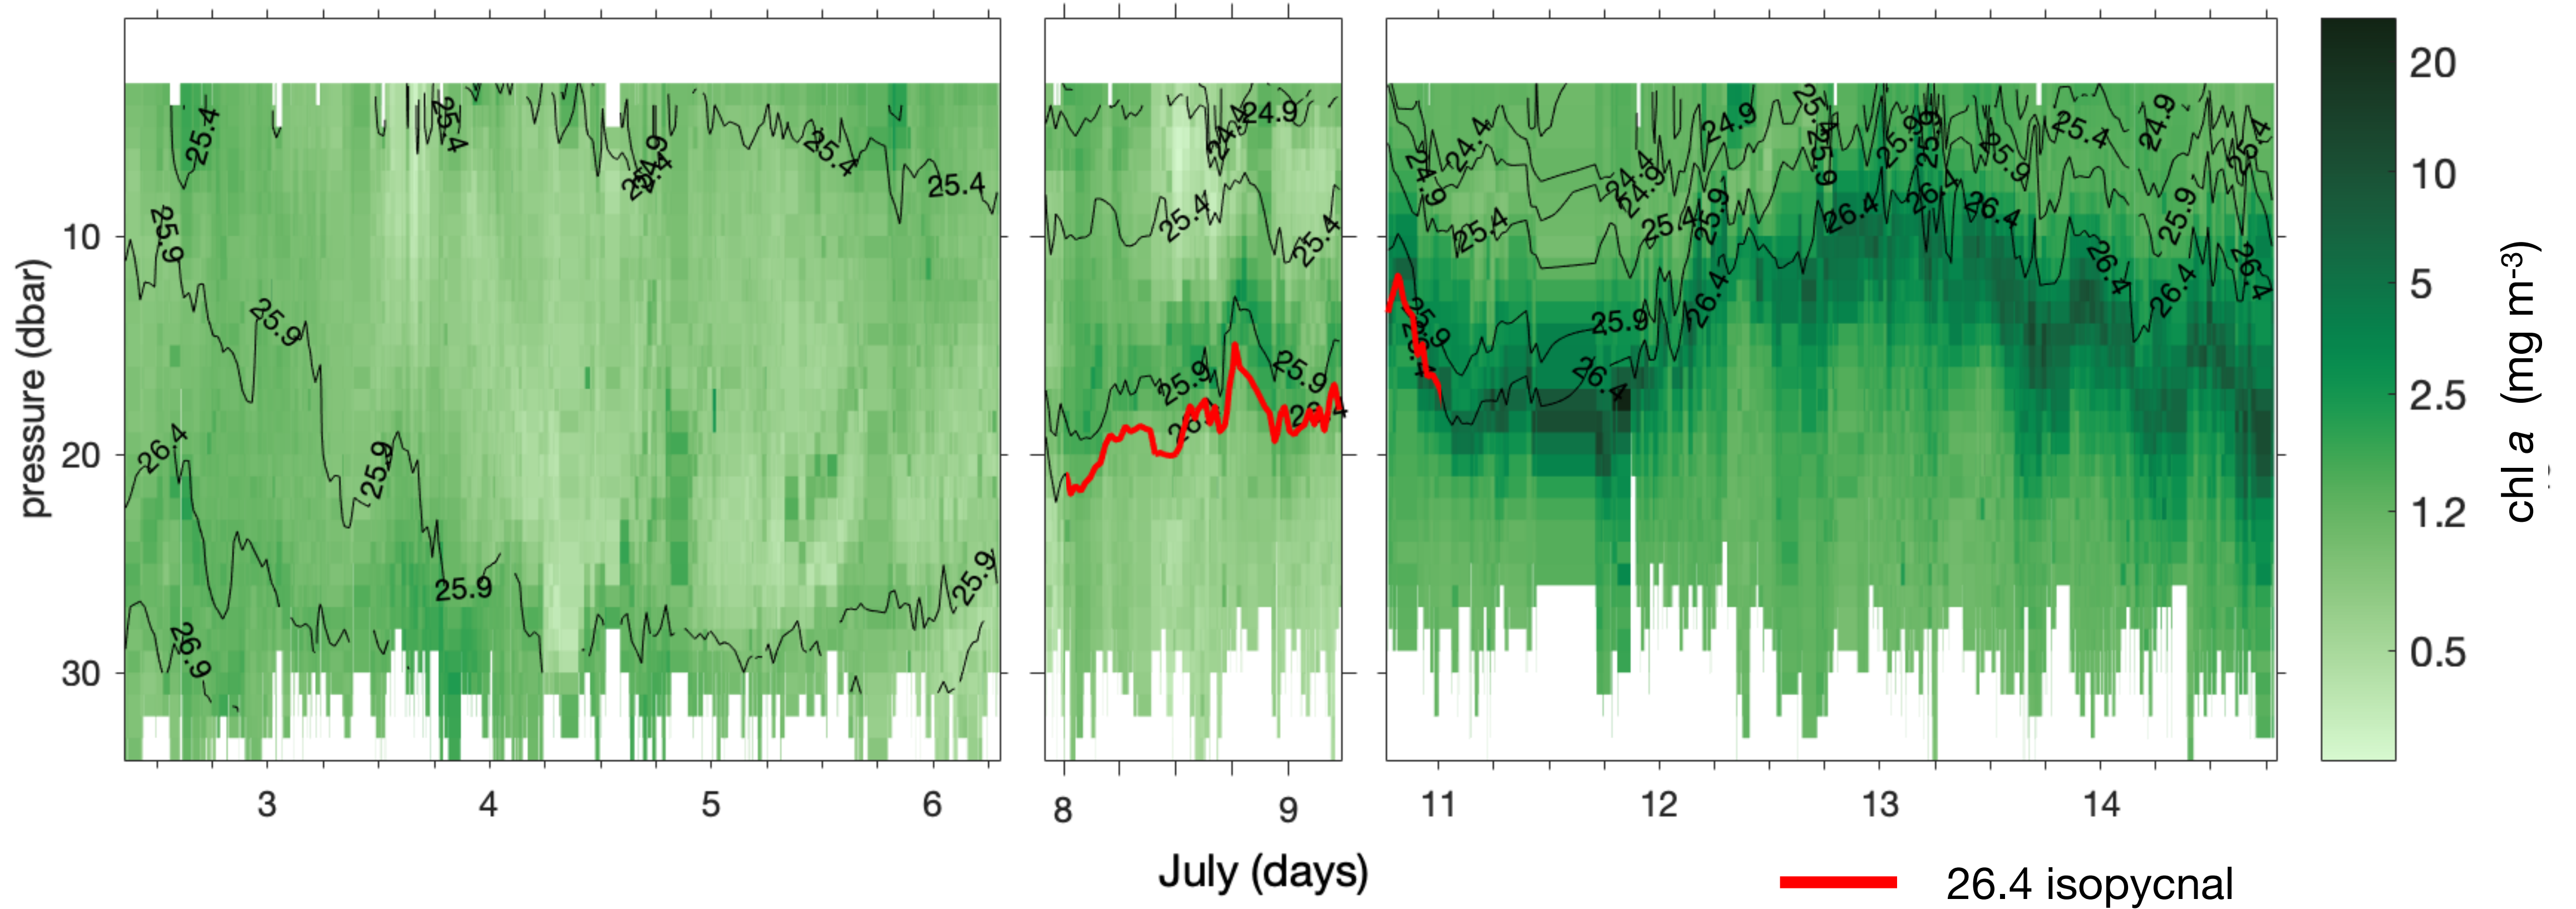

$$\frac{\partial chl\ a}{\partial t} = \left( \frac{\partial chl\ a}{\partial t} \right)_{gains} - \left( \frac{\partial chl\ a}{\partial t} \right)_{losses}$$

$$\frac{\partial chl\ a}{\partial t} = \boxed{\left( \frac{\partial chl\ a}{\partial t} \right)_{biological}} + \left( \frac{\partial chl\ a}{\partial t} \right)_{physical} - \boxed{\left( \frac{\partial chl\ a}{\partial t} \right)_{biological}} - \left( \frac{\partial chl\ a}{\partial t} \right)_{physical}$$

**Growth rate**

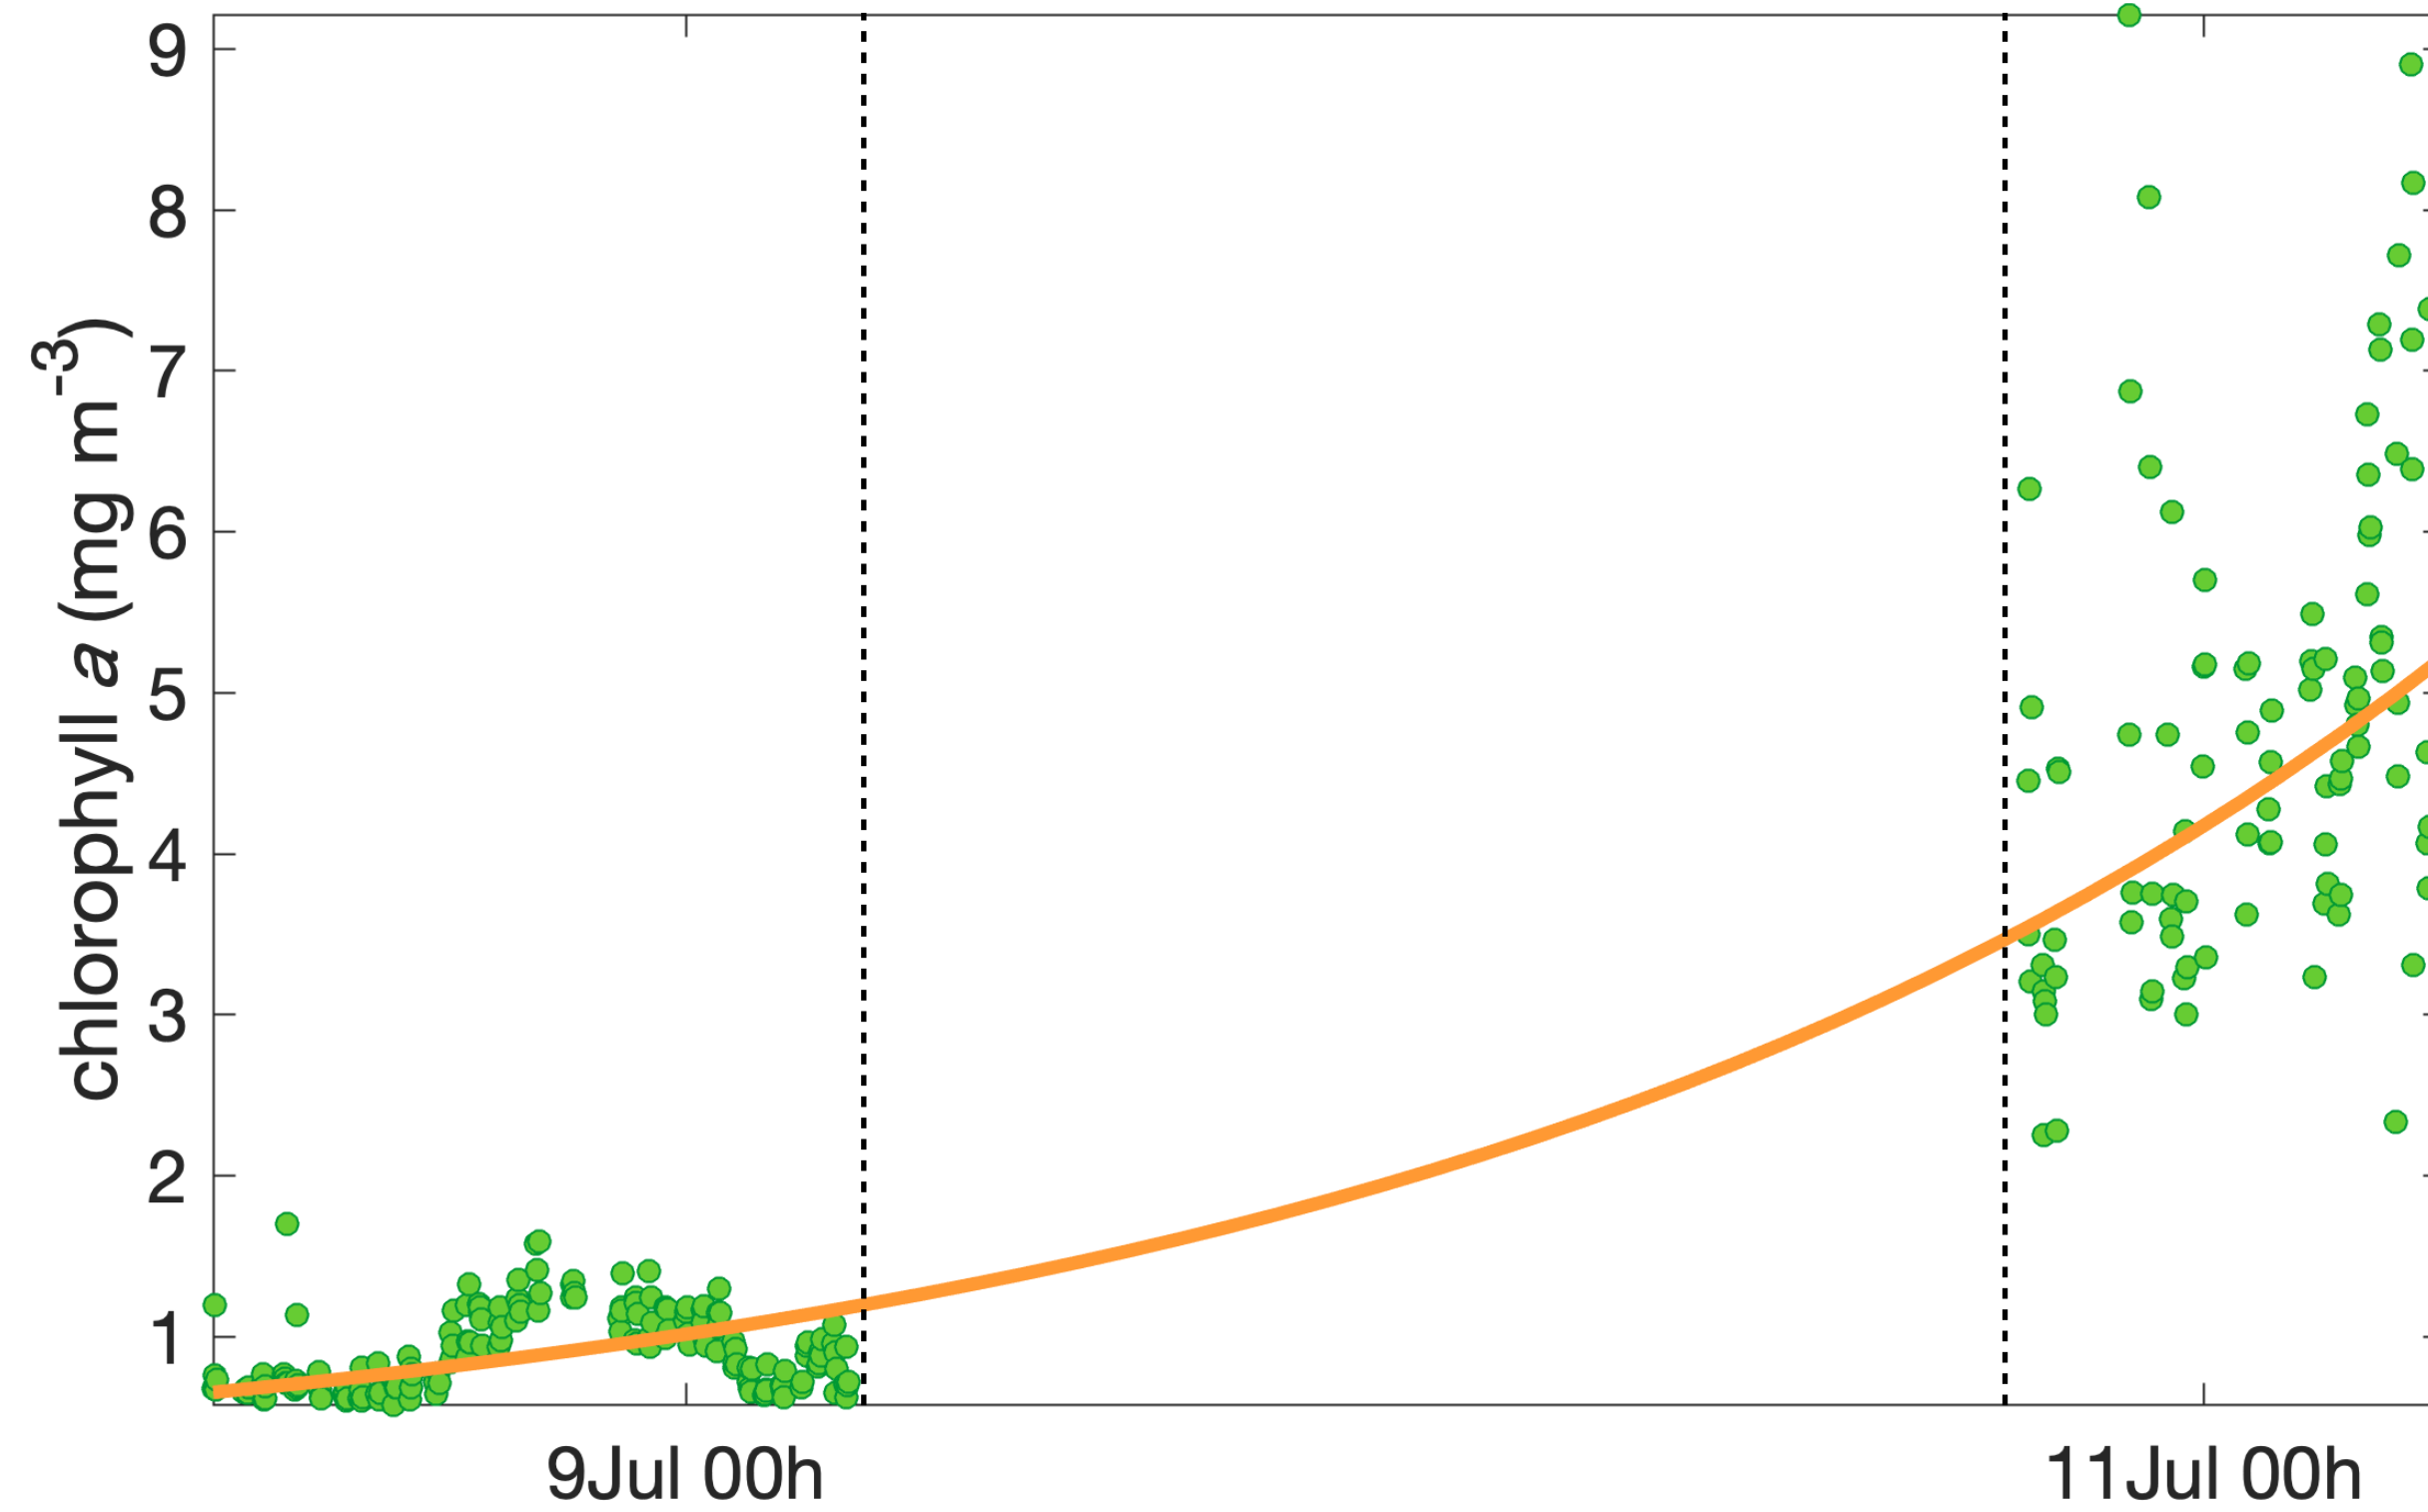

# Net rate

Chlorophyll values at 26.4 isopycnal  
between PP experiments

# Net rate

**Chlorophyll *a*** values at **26.4 isopycnal**  
between PP experiments

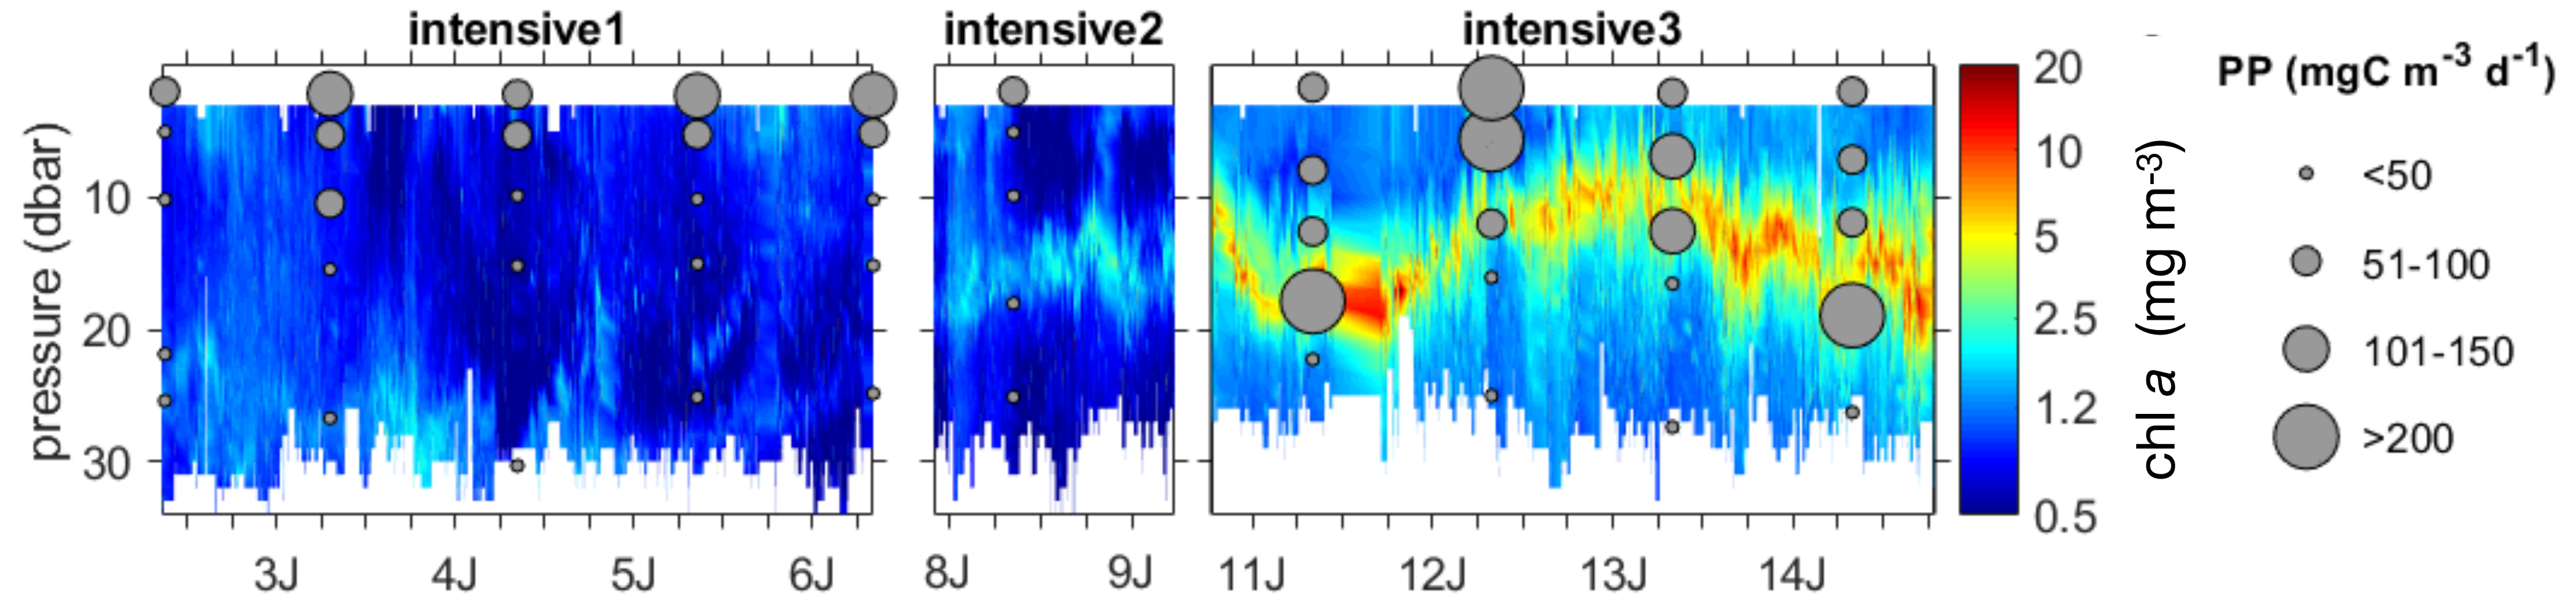

# Net rate

physical + biological

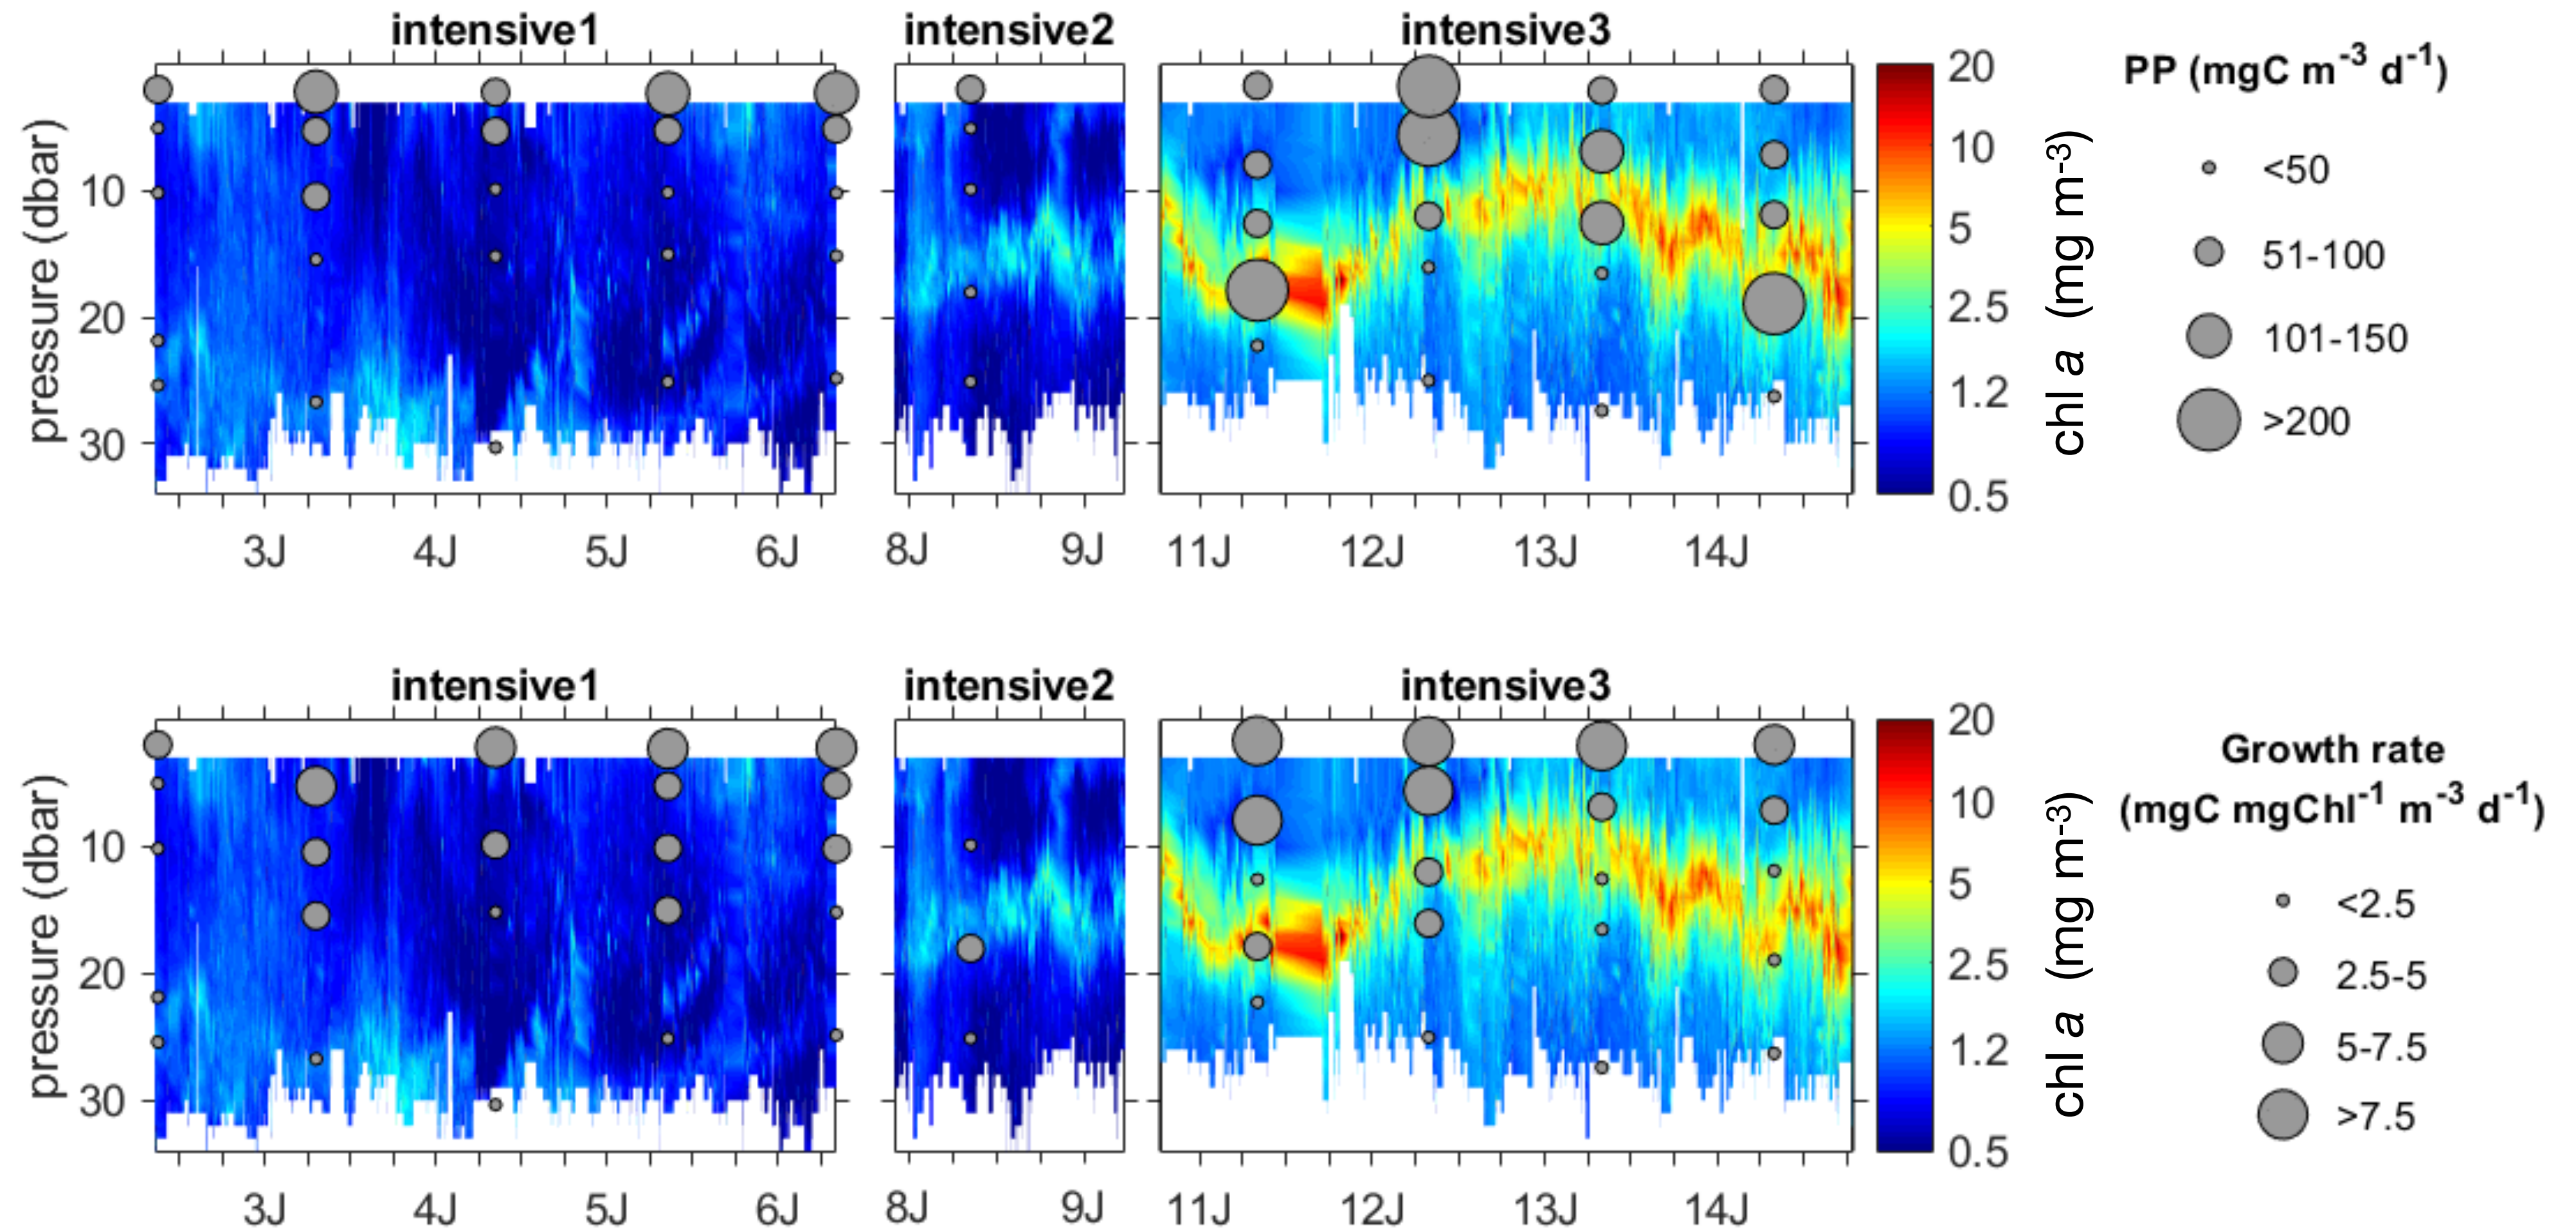

**Chlorophyll *a*** values at **26.4 isopycnal**  
between PP experiments

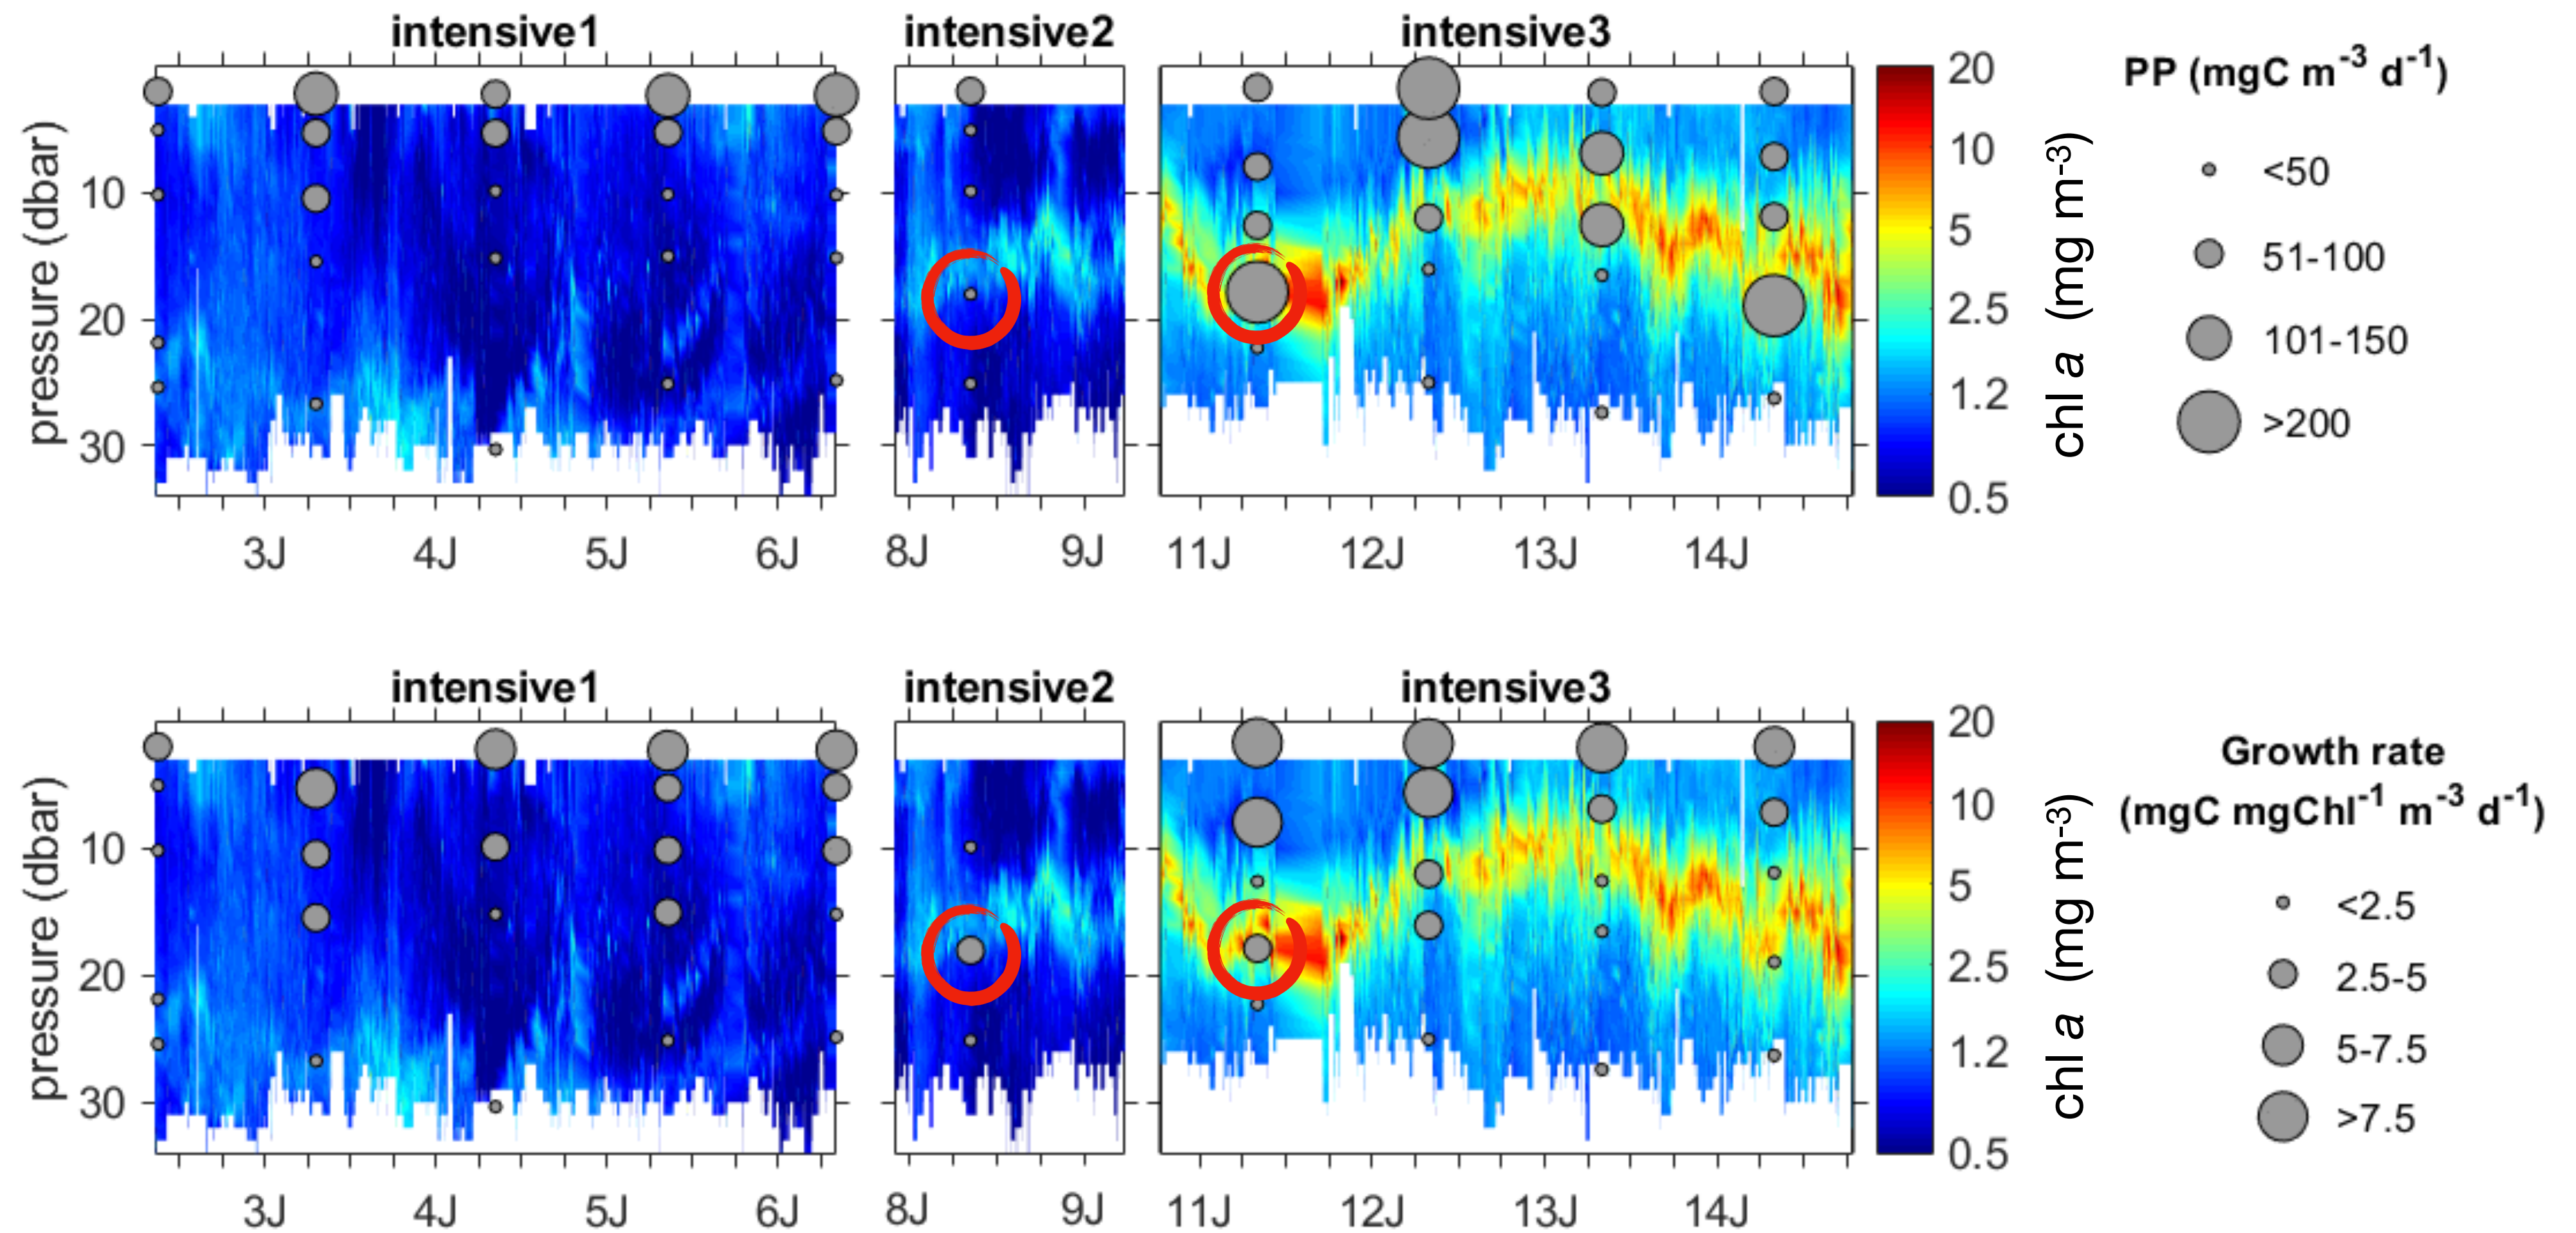

# Biological processes

# Biological processes

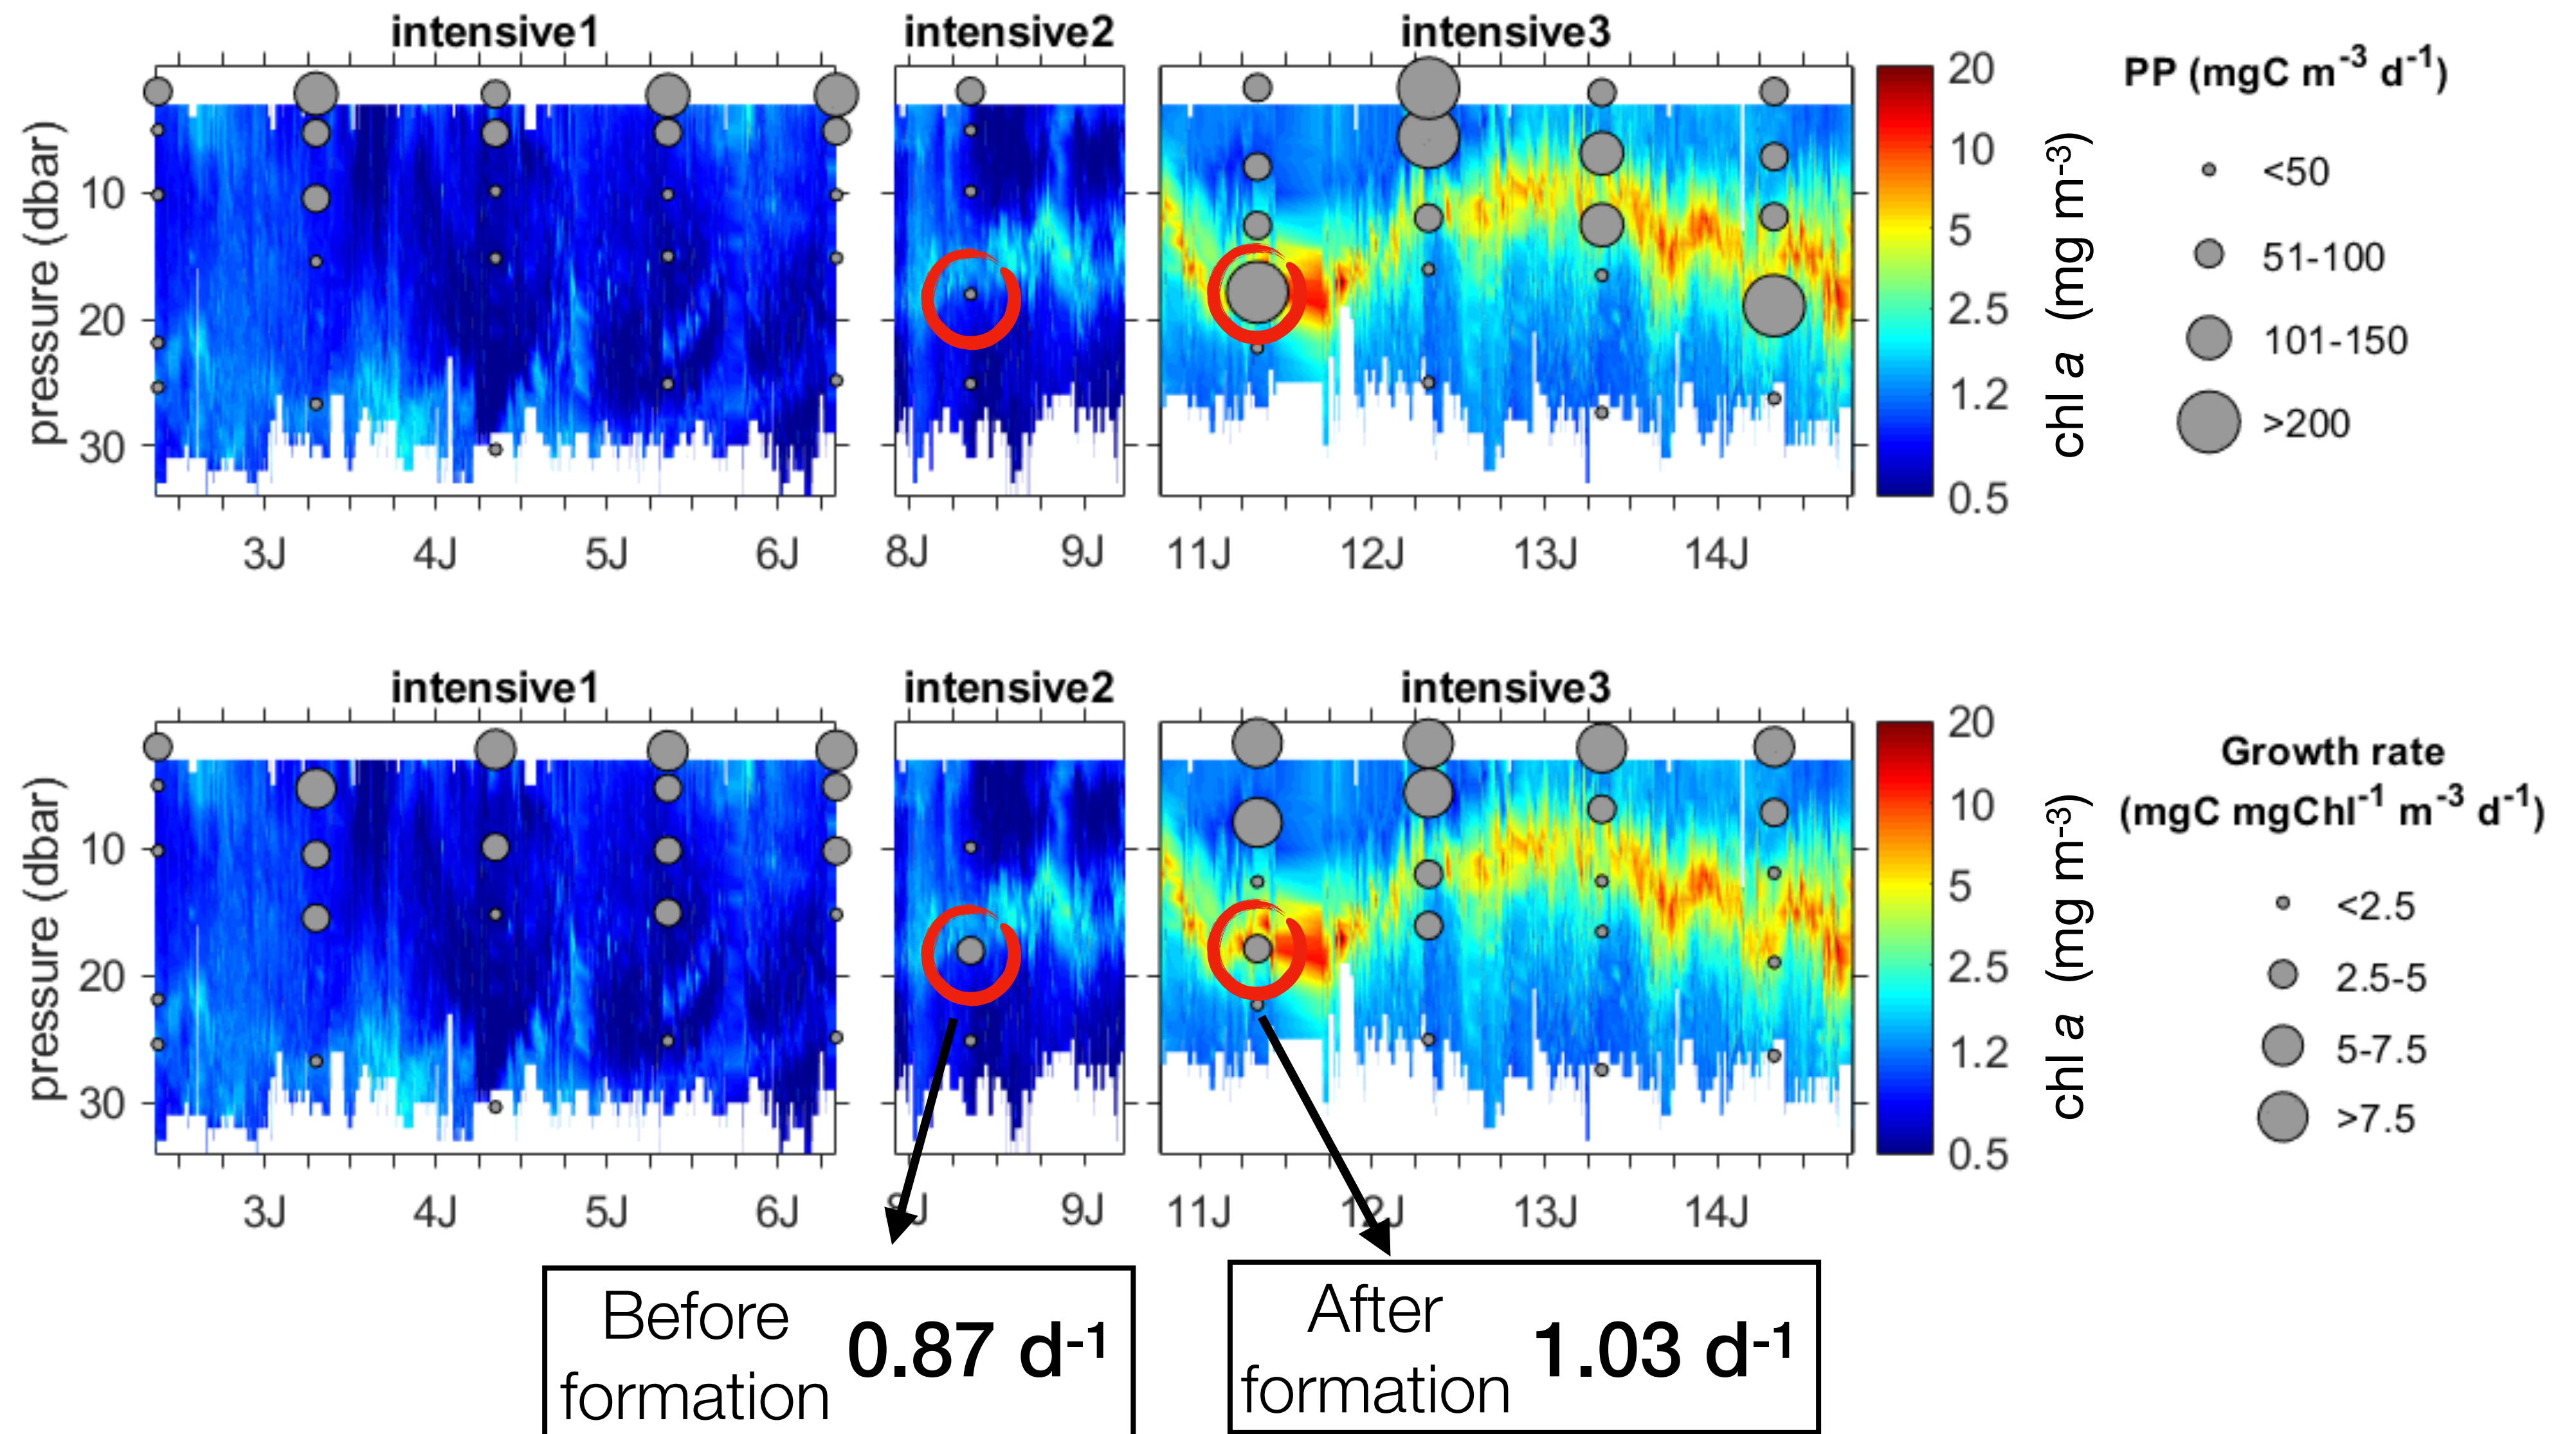

# Biological processes

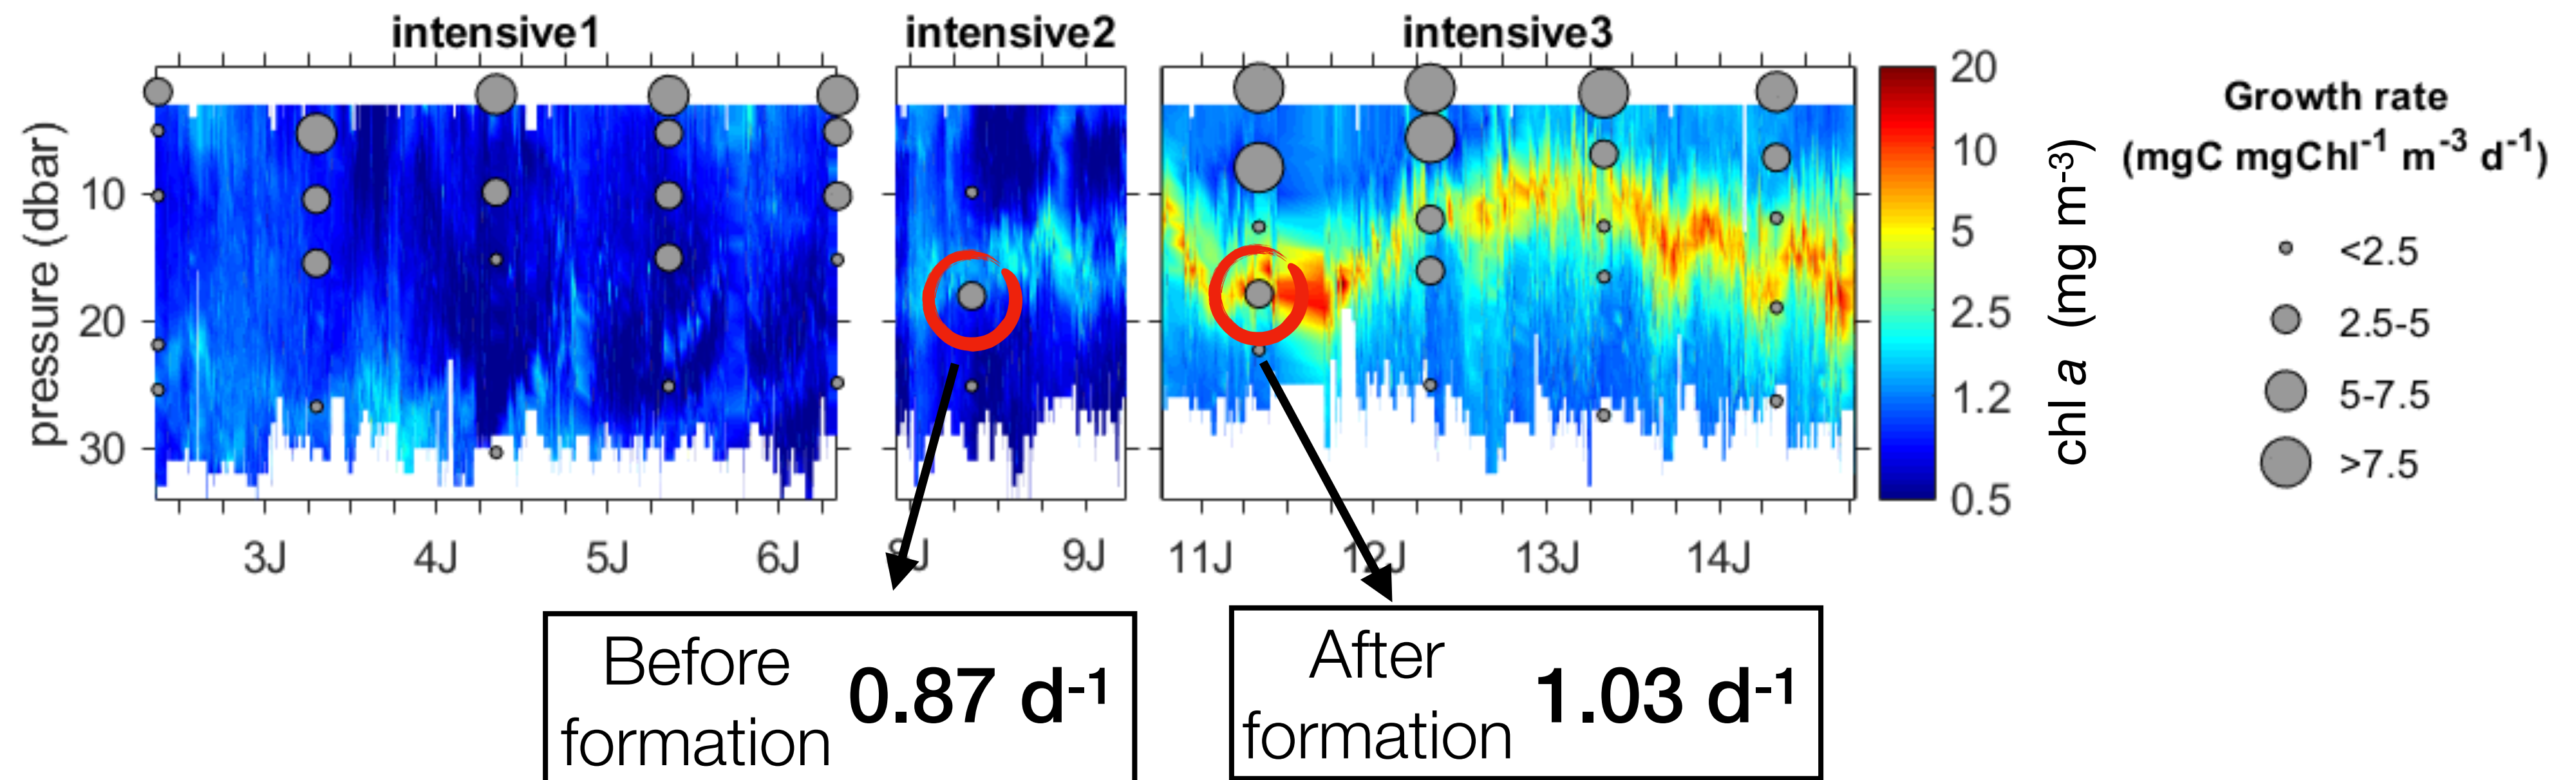

# Growth rate

# Growth rate

$$\text{Growth rate} = \frac{0.87 \text{ d}^{-1} + 1.03 \text{ d}^{-1}}{2}$$

$$\text{Growth rate} = 0.95 \pm 0.11 \text{ d}^{-1}$$

# What was the contribution of physical and biological processes?

$$\frac{\partial chl\ a}{\partial t} = \left( \frac{\partial chl\ a}{\partial t} \right)_{biological} + \left( \frac{\partial chl\ a}{\partial t} \right)_{physical} - \left( \frac{\partial chl\ a}{\partial t} \right)_{biological} - \left( \frac{\partial chl\ a}{\partial t} \right)_{physical}$$

## Net rate vs Growth rate

- If... Growth rate = Net rate → Biological processes could explain net accumulation
- If... Growth rate < Net rate → Both combination
- If... Growth rate > Net rate → Physical processes are decreasing concentration

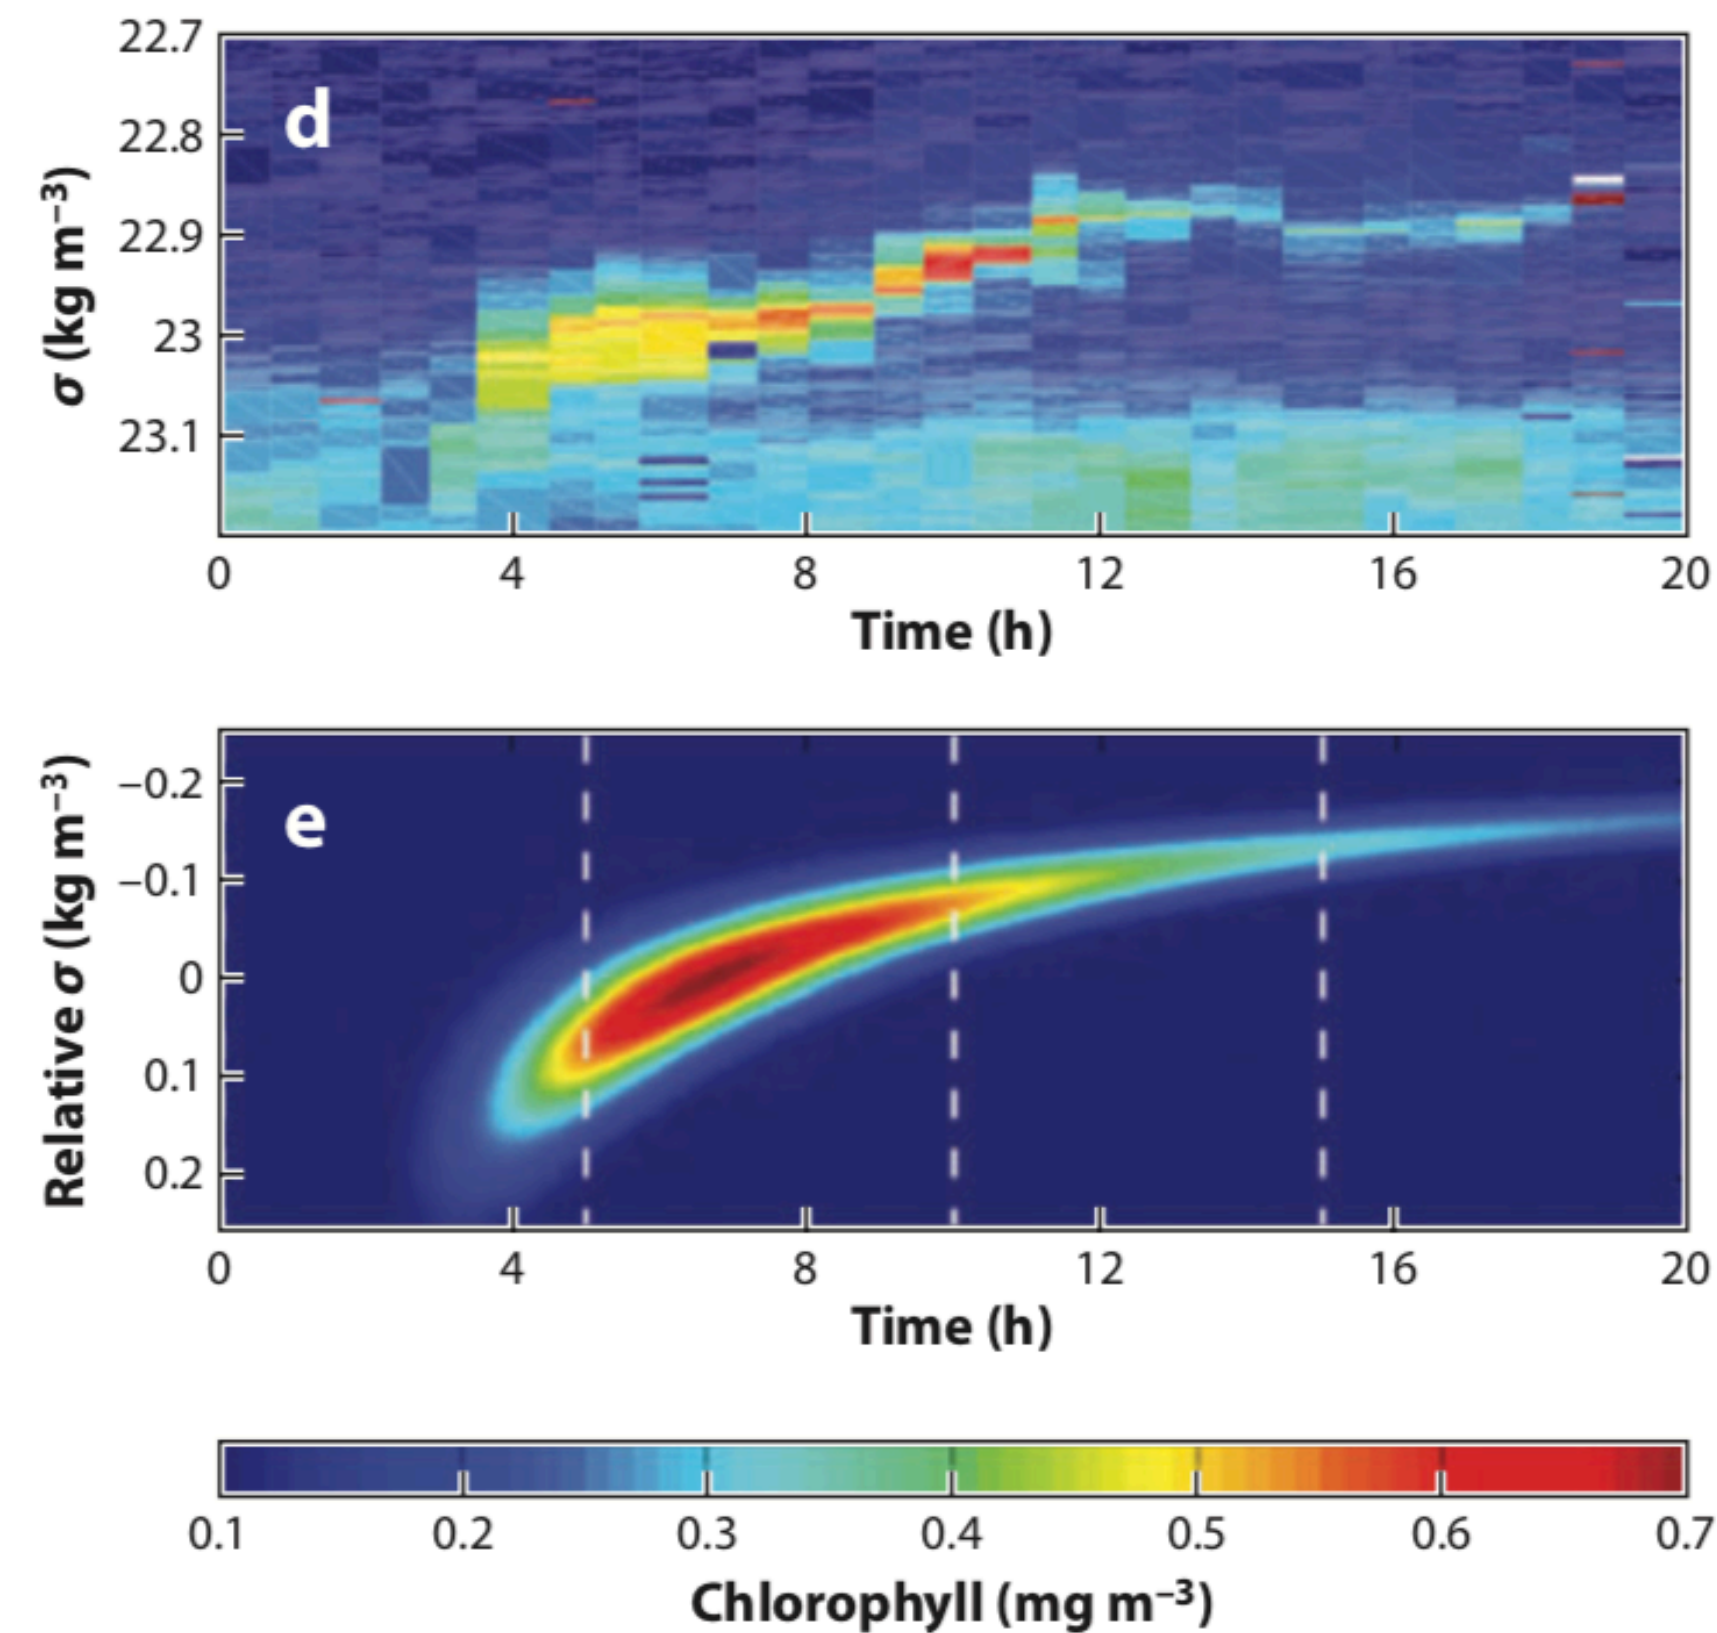

$$\text{Growth rate} = 0.95 \pm 0.11\ d^{-1} > \text{Net rate} = 0.7 \pm 0.01\ d^{-1}$$

# Conclusions

1. Thin layer was formed during the **transition from downwelling to upwelling** over a period less than two days
2. It was a **local feature** present in only one station
3. Our analyses are not enough to explain which processes were the main responsible of the thin layer formation

# Next step

To apply a model that can reproduce the thin layer to know what mechanisms are forming this features in this region

## Thin layers detection:

- \* Thickness < 3 m
- \* Intensity > 2 x Background

## Growth rate calculations:

$$\text{Growth rate} = \frac{PPnet \times 0.8}{\text{extracted chl } a \times (C : \text{chl } a \text{ ratio})}$$
